

SEARCH REQUEST FORM

6-963

Examiner # (Mandatory): _____ Requester's Full Name: Li LeeArt Unit 1645 Location (Bldg/Room#): 8E17 Phone (circle 305 306 308) 8891Serial Number: 09/041,236 Results Format Preferred (circle): PAPER DISK E-MAIL

Title of Invention _____

Inventors (please provide full names): _____

Earliest Priority Date: _____

Keywords (include any known synonyms registry numbers, explanation of initialisms):

Please search

- (1) each residues (in claims 11 and 12) of SEQ ID NO=2
see the attached claims
- (2) 1-190.2 of SEQ ID NO=1 (NA)

Search Topic:

Please write detailed statement of the search topic, and the concept of the invention. Describe as specifically as possible the subject matter to be searched. Define any terms that may have a special meaning. Give examples of relevant citations, authors, etc., if known. You may include a copy of the abstract and the broadcast or most relevant claim(s).

Thanks

AF030699 1192 bp mRNA ROD 04-SEP-1998
LOCUS Mus musculus semaphorin L (SemaL) mRNA, partial cds.
DEFINITION AF030699
ACCESSION AF030699
NID 93523116
KEYWORDS house mouse.
SOURCE Mus musculus
ORGANISM Mus musculus
Eukaryota; Metazoa; Chordata; Vertebrata; Mammalia; Eutheria;
Rodentia; Sciurognathi; Muridae; Murinae; Mus.
REFERENCE 1 (bases 1 to 1192)
Lange, C., Liehr, T., Goen, M., Gebhart, E., Fleckenstein, B. and
Ensser, A.
TITLE New eukaryotic semaphorins with close homology to semaphorins of
DNA viruses
JOURNAL Genomics 31 (3), 340-350 (1998)
MEDLINE 98389619

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Statistics: Mean 18.022; Variance 56.032; scale 0.322

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT New class of semaphorin peptide(s) and polypeptide(s) - are
PT potent modulators of nerve cell growth and regeneration
PS Example 2; Page 79-82; 101pp; English.
CC The sequence of the Drosophila semaphorin II protein. The gene was
CC isolated by PCR using primers based on sequence homology between the
CC complete grasshopper and partial Tribolium and Manduca (moth) semaphorin
CC gene sequences. The products gave two different sequences, each of which
CC was used to obtain its respective complete sequence: semaphorin I
CC (Q87444) and II. The proteins encoded by the grasshopper semaphorin I
CC (Q87441), human semaphorin III (Q87442), vaccinia virus semaphorin IV,
CC Drosophila semaphorin I and II, Tribolium semaphorin I (Q87446) or
CC variola major (smallpox) virus semaphorin IV (Q87447) genes were used to
CC generate a series of peptides (R70370-R70418), which retain semaphorin
CC receptor binding activity. The semaphorin derived or semaphorin receptor
CC derived peptides are potent modulators of nerve cell growth, immune
CC responsiveness and viral pathogenesis. They can be used in diagnosis and
CC treatment of neurological disease and neuro-regeneration, immune
CC modulation and diagnosis and treatment of viral and oncological infection
CC and diseases.

PT New class of semaphorin peptide(s) and polypeptide(s) - are
PT potent modulators of nerve cell growth and regeneration
PS Example 2: Page 74-77; 101pp; English.
CC The sequence of the Drosophila semaphorin I protein. The gene was
CC isolated by PCR using primers based on sequence homology between the
CC complete grasshopper and partial Tribolium and Manduca (moth) semaphorin
CC gene sequences. The products gave two different sequences, each of which
CC was used to obtain its respective complete sequence: semaphorin I and II
CC (Q87445). The proteins encoded by the grasshopper semaphorin I (Q87441),
CC human semaphorin III (Q87442), vaccinia virus semaphorin IV, Drosophila
CC semaphorin I and II, Tribolium semaphorin I (Q87446) or variola major
CC (smallpox) virus semaphorin IV (Q87447) genes were used to generate a
CC series of peptides (R70370-R70418), which retain semaphorin receptor
CC binding activity. The semaphorin derived or semaphorin receptor derived
CC peptides are potent modulators of nerve cell growth, immune
CC responsiveness and viral pathogenesis. They can be used in diagnosis and
CC treatment of neurological disease and neuro-regeneration, immune
CC modulation and diagnosis and treatment of viral and oncological infection
CC and diseases.

Tabular output not generated.

Title: >US-09-041-236-2
Description: (475-482) from US09041236.pep (25 of 45)
Perfect Score: 79
Sequence: 1 RDPYCGWD 8

Scoring table: PAM 150
Gap 11
Searched: 122810 seqs, 40068593 residues

Post-processing: Minimum Match 0%
Listing first 45 summaries

Database: pir60
1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 23.687; Variance 34.260; scale 0.691

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Title: >US-09-041-236-2
Description: (237-245) from US09041236.ppt (17 of 45)
Perfect Score: 53
Sequence: 1 DQGGESSLS 9

Scoring table: PAM 150
Gap 11

Searched: 122810 seqs, 40068593 residues

Post-processing: Minimum Match 0%
Listing first 45 summaries

Database: pir60
1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 20.028; Variance 19.976; scale 1.003

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

COMMENT       Phosphorylase, an important allosteric enzyme in carbohydrate
               metabolism, catalyzes the formation of glucose 1-phosphate from
               polyglucose. Enzymes from different sources differ in their
               regulatory mechanisms and in their natural substrates. However,
               all known phosphorylases share catalytic and structural
               properties; the binding site for pyridoxal 5'-phosphate is highly
               conserved.

 Nucleic acid molecule encoding CD100 antigen - which stimulates
 leukocyte response, e.g. B cell aggregation, differentiation,
 survival and T cell proliferation
 Example 8; Page 81-83: 135pp: English.
 A cDNA molecule (760666) codes for mouse CD100 antigen (W17658) a
 novel leukocyte semaphorin-like protein that stimulates a leukocyte
 response, including B cell aggregation, B cell differentiation, B
 cell survival and/or T cell proliferation. It was isolated from a
 cDNA library prep. from murine T cells activated with anti-CD3
 and anti-CD28 antibodies using a probe corresponding to the
 semaphorin and Ig domains of the human CD100 sequence (see also
 760666). CD100 nucleic acids, antisense sequences, recombinant
 vectors, host cells expressing CD100, and CD100 polypeptides can
 be utilised in diagnostic and therapeutic methods involving
 modulation of B and T cell responses, neuron axonal growth and
 immune cell-nerve cell interaction.

PT New human semaforin gene - useful in the diagnosis of nervous system
and immune disorders
PS Claim 2; Page 12-13; 15pp; Japanese.
CC The present sequence encodes human semaphorin (translated from the
Japanese specification as semaforin). Semaphorin has nerve extension
inhibiting activity. The semaphorin gene is useful for the diagnosis,
treatment and researches on nervous diseases and immune diseases.

PT Nucleic acid molecule encoding CD100 antigen - which stimulates
leukocyte response, e.g. B cell aggregation, differentiation,
survival and T cell proliferation
PS Claim 4; Page 65-69; 135pp; English.
CC A cDNA molecule (T60665) codes for human CD100 antigen (W17657) a
novel leukocyte semaphorin-like protein that stimulates a leukocyte
response, including B cell aggregation, B cell differentiation, B
cell survival and/or T cell proliferation. It was isolated by COS
cell expression cloning. Poly-A+ RNA from PHA-stimulated human T
cells was introduced into COS cells, and CD100-expressing cells
were selected by immunoselection and panning with CD100 monoclonal
antibody BD16. CD100 nucleic acids, antisense sequences,
recombinant vectors, host cells expressing CD100, and CD100
polypeptides can be utilised in diagnostic and therapeutic methods
involving modulation of B and T cell responses, neuron axonal
growth and immune cell-nerve cell interaction.

PT Semaphorin 2 and the gene encoding it - also inhibitors of its
PT action which can be used as promoters of central nerve regeneration
PS Claim 1; Page 72-74; 106pp; Japanese.
CC This sequence represents the human semaphorin 2 gene. The protein encoded
CC by this sequence, and the rat semaphorin 2 protein (see W19856) can be
CC used for screening possible candidates for activity as semaphorin 2
CC inhibitors. Proteins containing all or part of the semaphorin 2 sequence
CC are useful as central nerve extension inhibitors. Semaphorin 2 inhibitors
CC identified by screening can be used as promoters of central nerve
CC regeneration.

PT DNA encoding 20K, 50K and 50K B cellulase and facilitating protein -
PT useful for bio-stoning and bio-finishing cotton fabrics, especially
PT denim, and as detergent for treating cellulosic fibre containing
PT textiles
PS Claim 1; Fig 19; 204pp; English.
CC This DNA molecule codes for a 20 kDa cellulase (W16542) with
CC endoglucanase activity (20K-cellulase) from Melanocarpus albus
CC ALK04237. The enzyme can be used over a wide range of pH and

CC temperatures up to at least 70 deg. The gene was obtained by PCR
CC amplification using primers (see T66545-46) based on tryptic
CC fragments (W16563 and W16573) of the isolated 20K-cellulase. It
CC has been deposited as ATCC 11024 and DSM 11012. It can be used to
CC prepare recombinant 20K-cellulase in transformed host cells, esp.
CC Trichoderma reesei. A novel enzyme preparation includes at least
CC 1 cellulase from Melanocarpus (see also W16543-45), Myriococcus,
CC Sporotrichum, Myceliophthora or Chaetomium. It can be used to
CC bio-stone cotton-containing fabrics or garments, especially denim,
CC or bio-finish textiles containing natural or man-made cellulose-
CC containing fibres. It can also be used in detergent, especially to
CC treat cellulosic fibre-containing textiles, to treat wood-derived
CC pulp or fibre or to improve animal feed quality.

PT	Streptomyces frenolicin gene cluster - useful for producing
PR	recombinant frenolicin antibiotics
PS	Claim 1; Page 40-60; 66pp; English.
CC	This DNA sequence comprises the Streptomyces frenolicin gene
CC	cluster containing specifically claimed coding sequences (genes
CC	A-U) that respectively encode 21 proteins (see W34199-219) involved
CC	in frenolicin synthesis. The genes can be divided into 5
CC	subclusters: (1) genes A, B, C, D and F encode an efflux pump; (2)
CC	genes H, I, J and K encode butyrate starter synthases; (3) genes
CC	L, M and N encode polyketide synthases (PKS); (4) genes O, P, Q and
CC	R encode a hemiketalase, a ketoreductase and cyclases/dehydrases;
CC	and (5) genes S and T encode a keto/enoyl reductase and a
CC	hydrolase. Also claimed are vectors, host cells (especially a
CC	Streptomyces sp., particularly Streptomyces roseofulvus), and the
CC	encoded proteins. Cells transformed using the above sequence can
CC	be cultured to produce frenolicins or frenolicin precursors. The
CC	precursors can be converted to frenolicins by chemical or other
CC	methods. The frenolicins can be oxidised to frenolicin B, an
CC	antibiotic used as an anticoccidial agent. The frenolicins can be
CC	used as animal feed additives.

PT Human collagen V-type gene - is used for diagnosis of human collagen V-type related diseases
PT Claim 1; Page 6-14; 19pp; Japanese.
CC This amino acid sequence of type V collagen contains several distinct domains including a region comprising repeated (Gly-X-Y) motifs and a central domain containing two copies of the Arg-Gly-Asp cell adhesion motif. The cDNA sequence encoding type V collagen was isolated from a human placental library and will be useful for diagnosis of diseases related to type V collagen.

PT Transgenic hypertensive rat model for study of hypertension - contains DNA encoding human renin and angiotensinogen linked to promoters for high expression of these genes in rats
PS Example: Pages 26-29; 44pp; Japanese.
CC The present sequence can be used in the preparation of a novel transgenic hypertensive rat, comprising DNA encoding human renin and angiotensinogen, linked to promoters for high expression of these genes in rats. The rat can be used as a model for the study of hypertension, and to screen possible candidate drugs for the

CC treatment of hypertensive disorders, e.g. renin and angiotensinogen conversion enzyme (ACE) inhibitors.

PT Cell line expressing human papilloma virus E5 gene - for
PT screening of drugs that inhibit action of E5 gene, and to
PT determine role of E5 gene expression in disease
PS Claim 8; Page 34; 42pp; English.
CC The sequence given is encoded by the human papillomavirus E5 gene
CC which was isolated from a keratinocyte or epithelial cell line. The
CC E5 gene has been cited as being involved in the ability of bovine
CC papillomavirus (BPV) to transform fibroblasts in vitro. It is well
CC conserved among various fibropapillomaviruses. The human
CC papillomavirus (HPV) E5 gene was amplified using polymerase chain
CC reaction from the plasmid HPV16DNA. The amplified sequence can be
CC introduced into a keratinocyte or epithelial cell line from an animal
CC species such as mouse, rat, rabbit, pig or goat. The HPV E5 gene
CC is a possible contributor to the neoplastic proliferation induced by
CC HPV16 in vivo. Therefore it is considered that HPV E5 expression
CC will play a role in human diseases caused by these viruses including
CC warts (papillomas), cervical dysplasia and probably carcinoma.

DR WPI: 90-022386/03.
PT New antigens of viral, esp. HIV, replication -
PT are fragments of trans-activating protein, opt. contg. aminoacid
PT substitution
PS Disclosure: 68pp; English.
CC The invention provides for a method of preparing peptide antagonists of
CC viral transactivating proteins (TAPs) by producing peptide fragments of
CC the TAP and then selecting those which show antagonistic activity.
CC Alternatively, peptides contg. an active domain of TAP (or the full
CC length protein) are prep'd., and one or more AA substn(s). is made to
CC eliminate transactivating activity without destroying binding ability.
CC The antagonists are useful as therapeutic agents in the control of viral
CC infection and viral pathogenicity. The cellular DNA synthesis-inducing
CC protein encoded by the bovine papillomavirus type 1 (BPV1) E5 oncogene
CC is one of the viral systems which the description of the application
CC of the invention focuses on. E5 is conserved among animal papillomavirus
CC type 1. Moreover, E5 is also conserved among two strong candidates for
CC causative agents of cervical carcinoma and other urogenital malignancies
CC (human papillomavirus type 16 (HPV16) and HPV18), as well as one of the
CC causative agents of venereal condylomas and juvenile laryngeal
CC papillomatosis.

PT New cortistatin peptide(s) - used to modulate sleep, detect
PT mutation(s) and screen for drugs
PT Claim 1; Page 104; 128pp; English.
CC This amino acid sequence is the novel mouse preprocortistatin protein.
CC cleavage at the N-terminal signal peptide site leads to the formation
CC of procortistatin, which is processed at any of the tandem basic amino
CC acid pairs Lys-Ser, or Lys-Lys to produce the mature cortistatin
CC proteins referred as mouse cortistatin-29, and cortistatin-14. The
CC purified cortistatin, and its agonists, are used to induce sleep while
CC its receptor antagonists (particularly antibodies) is used to inhibit
CC sleep. Although cortistatin is structurally similar to somatostatin,
CC it is able to depress neuronal electrical activity, induce low frequency
CC waves in the cerebral cortex, antagonise acetylcholine and therefore
CC enhance slow-wave sleep. The antibodies, and oligonucleotide primers,
CC are used in usual immunoassays and hybridisation/amplification assays to
CC detect or quantify cortistatin (including that administered
CC therapeutically) or its nucleic acid. Oligonucleotides, e.g. antisense
CC molecules, are used in vivo to alter cortistatin gene expression.
CC Detection of a mutation in the cortistatin gene may provide diagnosis of
CC sleep-related or neuronal depression-related disorders or diseases of
CC the brain.

PT markers and therapeutic tools
PS Disclosure; pp; English.

```

CC The polypeptide forms part of a chimera. The other components are a heavy
 CC chain variable region and human-derived constant light and heavy chain
 CC regions. The variable regions have high affinity for TAG72. The constant
 CC regions reduce the side-effects when administered to human patients
 CC because they are of human origin.
 CC See also R04381-5 and R04386-8.

 PT Chimaeric antibody specific for hepatitis B virus pre-S2 surface
 PT antigen - useful for treating and preventing hepatitis B virus
 PT infections
 PS Claim 3; Page 12; 23pp; English.
 CC This sequence represents that of the V kappa region of a chimaeric
 CC human/murine monoclonal antibody to the pre-S2 antigen. The pre-S2
 CC antigen is reported to have enhanced immunogenicity as compared with
 CC the currently used S antigen. Use of the human C region eliminates
 CC patient immune response to the murine C region which improves
 CC efficacy and reduces undesirable clinical side effects.

Statistics: Mean 22.349; Variance 23.986; scale 0.932

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT Competitive immunoassay for peptide antigen, esp. tumour marker -
PT using immobilised fusion protein as competitive reagent.
PS Example 6; Column 23-24; 17pp; English.
CC NP5 fusion protein (R98295) is produced by NP5 cDNA (T34468)
CC inserted into lambda/gtl1 and expressed in bacteria infected with
CC the phage carrying the cDNA immediately after the beta-galactosidase
CC gene. It contains an epitope (R98296) for antibody Mc5, whose native
CC antigen is human breast mucin NPgp. NP5 does not bind to other
CC anti-NPgp MABs. The results illustrate the use of MABs to select a
CC DNA fragment from a cDNA library that encodes a portion of a non-
CC natural fusion protein that is produced in bacteria as a result of
CC being inserted after an auxiliary gene (i.e. beta-galactosidase).
CC The fusion protein can be incorporated into a kit and/or immunoassay
CC to detect neoplastic peptides from mammary tumour or metastasis.

PT New solid-phase competitive immunoassay using a fusion protein -
PT which binds to an antibody for the analyte and to an immobilised
PT antibody
PS Example 6; Column 23-24; 16pp; English.
CC R96579 is a portion of NP5, a fusion protein of beta-galactosidase and
CC an antigen from a human breast cancer cell line MCF-7, which binds
CC to monoclonal antibody Mc5 which binds to a breast epithelial mucin.
CC Mc5 only binds to 2 overlapping epitopes (see R96581 and R96582). The
CC fusion protein is used to demonstrate a new in vitro solid-phase,
CC competitive assay for detecting a peptide analyte in a sample. The
CC method uses two monoclonal antibodies which are respectively specific
CC for either a first or second peptide, in this case beta-galactosidase
CC and the breast cancer cell antigen. The method is partic. useful for

```

```

CC detecting the presence of a solid tumour or metastasis, as shown in
CC the above example, and also for the detection of growth hormone or
CC serum albumin.

PT Non-A, non-B, non-C, non-D, non-E Hepatitis virus reagents - useful
PT for diagnosis and therapy of Hepatitis GB virus
PS Example 18; Pages 526-540; 661pp; English.
CC Double stranded hepatitis GB virus (HGBV) DNA obtd. from HGBV
CC infected tamarin plasma, using standard procedures, was used to
CC prepare a lambda phage HGBV cDNA library. Clones were rescued
CC from the lambda phage, searched against a sequence database and
CC found to be unique HGBV sequences. The clones were then used to
CC assemble the sequences GB contig A and B, which were amplified
CC using random primers. The prod. of which was amplified to give a
CC fragment of GB contig C, then using specified primers the
CC complete sequence of GB contig C was assembled to give T04247,
CC which encodes the proteins R95020-21 (the 3 possible coding strand
CC reading frames). Reagents which comprise the HGBV DNA, or its
CC protein prods. can be used for the diagnosis, therapy or in a
CC vaccine to prevent HGBV infection.

 PT Use of mutant genes having frame:shift mutation(s) - for developing
 PT prods. for the diagnosis, prevention and treatment of associated
 PT diseases, e.g. cancer or neurodegenerative disease
 PS Claim 22; Fig 2; 123pp; English.
 CC W18642 and W18643 are +2 and +1 frameshift mutations, respectively, of a
 CC sequence comprising fragments of the coding sequence of the human amyloid
 CC A4 gene corresponding to nucleotides (nt) 147-586 followed by nt
 CC 1047-1526 of the wild-type amyloid A4 gene. These regions of the gene
 CC contain GAGAG motifs. Frameshift mutants of the tau, ubiquitin,
 CC apolipoprotein E, microtubule-associated protein 2 (MAP-2), neurofilament
 CC subunit L, M and H and amyloid A4 genes are claimed. All these genes
 CC share a common GAGAN motif (N= A, G, C or T), which is the site of common
 CC GA dinucleotide deletion(s) that cause neurodegenerative disorders.
 CC Antigenic peptides used for the production of antibodies, and small
 CC nucleic acid sequences derived from frameshift mutants are used in the
 CC diagnosis, prevention and treatment of cancer and neurodegenerative
 CC diseases, e.g. Parkinson's disease, Alzheimer's disease, Down's syndrome,
 CC frontal lobe dementia (Pick's disease), progressive supranuclear palsy
 CC (PSP), amyotrophic lateral sclerosis, Huntington's disease, multiple
 CC sclerosis, and other degenerative diseases such as cardiovascular
 CC disease and rheumatoid arthritis.

 PT New isolated p300/CBP-associated factor, P/CAF - used to develop
 PT products for modulating transcription, e.g. for treating HIV
 PT infection or cancers or for promoting muscle differentiation
 PS Claim 8; Page 74-75; 107pp; English.
 CC This polypeptide comprises the N-terminal region (amino acid
 CC residues 1-351) of a novel human p300/CBP associated cofactor,
 CC P/CAF (see W40052), that modulates transcription through binding
 CC to the cell transcription cofactors p300 (see W40055) and CBP
 CC (see W40060) and through acetylation of histones. This N-terminal
 CC region contains the binding site for p300/CBP. The invention
 CC provides methods of screening for compounds that inhibit or
 CC stimulate the transcription modulating and histone acetyltransferase
 CC activity of P/CAF and p300/CBP. Inhibitors can be used e.g. to
 CC inhibit HIV TAR-mediated transcription in the treatment of HIV
 CC infection. Stimulators can be used e.g. to activate tumour
 CC suppressor p53 in the treatment of cancer or to activate the muscle
 CC differentiation factor MyoD to promote muscle differentiation. The
 CC products can also be used to inhibit the cell cycle progression
 CC inducing effect of an oncoprotein which binds p300/CBP in a
 CC subject. The N-terminal region is specific for P/CAF and can be
 CC used to identify and define P/CAF.

 PT Human neuronal nicotinic acetylcholine receptor subunits and DNA -
 PT also transformed cells useful for screening cpds, which modulate
 PT activity of the receptor
 PS Disclosure; Page 68-70; 99pp; English.
 CC The present sequence represents a human neuronal nicotinic acetylcholine
 CC receptor (NACHR) subunit. The cells expressing the alpha and/or beta

CC NACHR subunits may be used in a method of screening compounds to
 CC identify any which modulate the activity of human neuronal NACHR.
 CC Subunit specific antibodies may be used to monitor the distribution
 CC and expression density of various subunits in normal vs diseased brain
 CC tissues. Testing of single receptor subunits or specific receptor
 CC subunit combinations with a variety of potential agonists or antagonists
 CC provides information with respect to the function and activity of the
 CC individual subunits and should lead to the identification and design of
 CC compounds that are capable of very specific interaction with one or
 CC more receptor subtypes. The resulting drugs should exhibit fewer
 CC unwanted side effects than drugs identified e.g. screening with cells
 CC that express a variety of subtypes.

PT New human neuronal nicotinic acetylcholine receptor alpha2 subunit DNA -
 PT used to develop prods. for detection, diagnosis and therapy and for
 PT modulating activity
 PS Disclosure: Page 43-46; 54pp; English.
 CC DNA encoding the human nACHR alpha2 subunit was isolated from
 CC human thalamus tissue cDNA library using corresp. rat cDNA. The
 CC insert of one clone obtd. was ligated with the insert of another
 CC clone to generate a full-length alpha 2 subunit cDNA. The DNA can be
 CC used to identify function nACHRs. Cells contg. the DNA can be used
 CC for screening to identify cpds. which modulate the activity of human
 CC nACHRs. The human nACHR alpha 2 subunit can be used to product
 CC antibodies which can be used in immunohistochemistry, diagnosis and
 CC therapy. The nucleic acids can be used for analysing disease states
 CC and creating animal models.

PT New isolated p300/CBP-associated factor, P/CAF - used to develop
 PT products for modulating transcription, e.g. for treating HIV
 PT infection or cancers or for promoting muscle differentiation
 PS Disclosure: Page 86-88; 107pp; English.
 CC This polypeptide comprises a novel murine p300/CBP associated
 CC cofactor, designated P/CAF (see W40059). P/CAF modulates
 CC transcription through binding to the cell transcription cofactors
 CC p300 and CBP and through acetylation of histones. The invention
 CC provides methods of screening for compounds that inhibit or
 CC stimulate the transcription modulating and histone acetyltransferase
 CC activity of P/CAF (see also W40052) and p300/CBP. Such compounds
 CC can be used e.g. to treat HIV infection or to promote muscle
 CC differentiation. Antisense RNA or antisense DNA can be used to
 CC inhibit the activity of mouse P/CAF.

 DR New isolated p300/CBP-associated factor, P/CAF - used to develop
 PT products for modulating transcription, e.g. for treating HIV
 PT infection or cancers or for promoting muscle differentiation
 PT Claim 1; Page 71-72; 107pp; English.
 PS This protein is a novel human p300/CBP associated cofactor,
 CC designated P/CAF, that modulates transcription through binding to
 CC the cell transcription cofactors p300 (see W40055) and CBP (see
 CC W40060) and through acetylation of histones. Its amino acid
 CC sequence was deduced from a clone (see V10090) obtained from a
 CC human foetal liver cDNA library. The N-terminal region (see
 CC W40056) of P/CAF, which contains the binding site for p300/CBP,
 CC and the C-terminal region (see W40054), which contains the histone
 CC acetyltransferase activity are also claimed. The invention provides
 CC methods of screening for compounds that inhibit or stimulate the
 CC transcription modulating and histone acetyltransferase activity of
 CC P/CAF and p300/CBP. Inhibitors can be used e.g. to inhibit HIV
 CC TAR-mediated transcription in the treatment of HIV infection.
 CC Stimulators can be used e.g. to activate tumour suppressor p53 in
 CC the treatment of cancer or to activate the muscle differentiation
 CC factor MyoD to promote muscle differentiation. The products can
 CC also be used to inhibit the cell cycle progression inducing effect
 CC of an oncoprotein which binds p300/CBP in a subject. The products
 CC can also be used for detection, screening assays and production of
 CC transgenic animals.

COMMENT         Ferredoxin--NADP+ reductase is localized in the matrix of adrenal
                  cortex mitochondria and functions as a component of the
                  mitochondrial steroid-hydroxylating enzyme system, which includes
                  ferredoxin--NADP+ reductase, adrenodoxin and two forms of
                  cytochrome P-450.

CC -|- FUNCTION: CYTOCHROMES P450 ARE A GROUP OF HEME-THIOLATE
CC MONOOXYGENASES. IN LIVER MICROSOMES, THIS ENZYME IS INVOLVED IN AN
CC NADPH-DEPENDENT ELECTRON TRANSPORT PATHWAY. IT OXIDIZES A VARIETY
CC OF STRUCTURALLY UNRELATED COMPOUNDS, INCLUDING STEROIDS, FATY
CC ACIDS, AND XENOBIOTICS.
CC -|- CATALYTIC ACTIVITY: RH + REDUCED FLAVOPROTEIN + O(2) = ROH +
CC OXIDIZED FLAVOPROTEIN + H(2O).
CC -|- SUBCELLULAR LOCATION: MEMBRANE-BOUND. ENDOPLASMIC RETICULUM.
CC -|- TISSUE SPECIFICITY: LIVER; NOT FOUND IN THE LUNG, KIDNEY, AND
CC PROSTATE.
CC -|- INDUCTION: CONSTITUTIVELY EXPRESSED.
CC -|- SIMILARITY: BELONGS TO THE CYTOCHROME P450 FAMILY.

CC -!- FUNCTION: OXIDOREDUCTASE REQUIRED FOR THE TRANSFER OF ELECTRONS
FROM PYRUVATE TO FLAVODOXIN, WHICH REDUCES NITROGENASE.
CC -!- SIMILARITY: THE IRON-SULFUR CENTERS ARE SIMILAR TO THOSE OF
'BACTERIAL-TYPE' 4FE-4S FERREDOXINS.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 PT Phaffia derived GAPDH and carotenoid synthesis genes and promoter
 PT fragment - used in the recombinant production of therapeutically
 PT useful proteins e.g. carotenoids for use in food colouring
 PS Claim 11; Page 72-74; 118pp; English.
 CC The present sequence represents a Phaffia derived carotenoid
 CC biosynthesis pathway enzyme. The nucleic acid encoding this protein
 CC can be used in the novel recombinant DNA of the present invention. The
 CC recombinant DNA comprises a transcription promoter operably linked to a
 CC downstream sequence to be expressed, where the transcription promoter
 CC comprises a region found upstream of the open reading frame (ORF) of a
 CC highly expressed Phaffia gene (preferably GAPDH, a ribosomal protein
 CC gene, an enzyme involved in the biosynthesis pathway). The recombinant
 CC DNA can be used to transform hosts, preferably Phaffia. These
 CC transformed hosts are then used in the recombinant production of GAPDH
 CC or an enzyme involved in carotenoid synthesis, preferably astaxanthin.
 CC They may also be used to produce a pharmaceutical product. Purified
 CC carotenoids can be used as colourants in food and/or feed, and also in
 CC cosmetics. 673 AA;

PT Recombinant production of anti-oxidant compounds - by the production
PT of an anhydrofructose from a glucan, used for improving plants for
PT use in foodstuffs.
PS Claim 7; Page 36-38; 53pp; English.
CC This is the amino acid sequence of an alpha-1,4-glucan lyase of
CC Morchella costata that is used in claimed processes of the
CC invention. A claimed process of preparing a medium that contains
CC an antioxidant and at least one other component involves preparing
CC antioxidant from a glucan, in situ, by use of recombinant DNA
CC techniques. Also claimed are: (1) use of anhydrofructose as an
CC antioxidant for a medium, where the anhydrofructose is prepared in
CC situ in the medium; (2) use of anhydrofructose for imparting or
CC improving stress tolerance in a plant, where the anhydrofructose is
CC prepared in situ in the plant; (3) use of glycan lyase (see
CC W88253-57 and W88278) for imparting or improving: (i) stress
CC tolerance in plant, or (ii) transformation of grape, where the
CC glucan lyase is prepared in situ; (4) use of a nucleotide sequence
CC (NS) coding for a glucan lyase (see V84192-97) as a means of
CC imparting or improving stress tolerance in a plant, where the NS is
CC expressed in situ in the plant, and (5) use of a NS coding for a
CC glucan lyase for imparting or improving the transformation of grape,
CC where the NS is expressed in situ in the grape. The antioxidant
CC containing medium can be used as a foodstuff or in the preparation
CC of foodstuffs such as beverages, in particularly alcoholic
CC beverages such as wine (claimed).

PT 1,5-D-anhydrofructose prodn. from alpha-1,4-glucan - by treatment
PT with pure alpha-1,4-glucan lyase, partic. useful as antioxidant and
PT sweetener for foods and beverages
PS Claim 9; Page 95-99; 166pp; English.
CC An alpha-1,4-glucan lyase enzyme (preferably pullanase or isoamylase)
CC is used in a new method for the production of 1,5-D-anhydrofructose.

CC The enzyme is isolated from either a fungus (M.costata or M.vulgaris)
CC or from fungally infected algae (G.lemaleiformis) or algae alone.
CC 1,5-D-anhydrofructose is useful as an antioxidant and sweetener for
CC foodstuffs and beverages. It is also useful as an intermediate for the
CC antibiotic microthecin, an oxygen scavenger during polymerisation
CC reactions and as a reducing agent in the synthesis of biodegradable
CC plastics.

PT Isolation of alpha-1,4-glucan lyase from fungus - and its
PT recombinant prodn from isolated DNA.
PS Claim 6; Fig 7; 51pp; English.
CC The enzyme alpha-1,4-glucan lyase(GL) was purified from Morchella
CC costata (Mc) by affinity chromatography on beta-cyclodextrin
CC Sepharose (RTM), ion exchange on Mono Q HR 5/5 (RTM) and gel
CC filtration on Sepharose (RTM) 12 columns. The purified enzyme
CC appeared colourless. The mol. mass was 110 kDa (SDS-PAGE). It showed
CC an isoelectric point of pI 5.4. The optimum pH range for the fungal
CC lyase catalysed reaction was between pH 5 and pH 7. The purified
CC fungal lyase degraded maltosaccharides. The highest activity was
CC with maltotetraose (activity 100%), then maltohexaose (97%),
CC maltotriose (56%) and maltose (2%). The lyase was digested with
CC endoproteinase Arg-C from Clostridium histolyticum or endoproteinase
CC Lys-C from Lysobacter enzymes. The resulting peptides were
CC sequenced (see FT). Amino acid sequences of three overlapping
CC tryptic peptides from GL (see R72713) were used to generate mixed
CC oligos which could be used as PCR primers for the amplification of
CC DNA isolated from Morchella. The primers are Q89703-04 and Q90305-06.

PT      Hereditary haemochromatosis gene and variants - useful for diagnosis
PT      and treatment of hereditary haemochromatosis disease
PS      Disclosure; Fig 4; 115pp; English.
CC      This polypeptide is the expression product of a novel human gene
CC      (see T96650) whose mutated form is associated with hereditary
CC      haemochromatosis (HH). A single mutation (24d1) in the HH gene
CC      appears responsible for the majority of HH disease. This comprises
CC      a G to A substitution that is present in 86% of affected
CC      chromosomes and in 4% of unaffected chromosomes. It results in a
CC      Cys to Tyr substitution in the encoded protein at a critical
CC      disulphide bridge important for secondary structure. The following
CC      are claimed: the 10825 bp genomic DNA sequence (1), a 1437 bp cDNA
CC      sequence (1a) (see T96691) and their 24d1, 24d2 and 24d7 variants;
CC      a cloning or expression vector; host cells; a peptide product
CC      chosen from the HH gene product, its variants (24d1, 24d2 and

```

```

CC      24d7), or a peptide of at least 56 amino acid residues of these; an
CC      antibody produced using the peptide as an immunogen; a method to
CC      determine the presence or absence of the common HH gene mutation;
CC      an animal model for the HH disease; metal chelation agents, T-cell
CC      differentiation factors and therapeutic agents for the mitigation
CC      of injury due to oxidative process in vivo or mitigation of iron
CC      overload; a method for screening potential therapeutic agents for
CC      activity in connection with HH disease; an antisense oligonucleotide
CC      directed against a transcriptional product of a nucleic acid
CC      sequence as above; and oligonucleotides or pairs of oligonucleotides
CC      covering a range of nucleotides from (1), (1a) or their variants,
CC      useful for detecting a polymorphism in the HH gene. The invention
CC      also relates to methods for screening for HH homozygotes, to HH
CC      diagnosis, prenatal screening and diagnosis, and therapies of HH
CC      disease, including gene therapy, protein- and antibody-based
CC      therapeutics, and small molecule therapeutics.

PT Glycosidase enzymes from organisms of the genera Staphylothermus,
PT Pyrococcus and Thermococcus - for deriving sugar from
PT oligosaccharides, useful in the e.g. food processing, textile or
PT baking industries
PS Claim 1; Fig 18a-b; 92pp; English.
CC This is the amino acid sequence of glycosidase VC1-7EG1, deduced
CC from a polynucleotide (see V36924) of a clone (7EG1) of Pyrococcus
CC furiosus VC1, which grows optimally at 100 degC. The invention
CC provides 18 polynucleotides (see V36907-24) coding for thermostable
CC glycosidases (see W49858-75) having glucosidase, alpha-galactosidase,
CC beta-galactosidase, beta-mannosidase, beta-mannanase, endoglucanase
CC or pullulanase activity. Vectors and host cells are also claimed.
CC A method is provided for producing the enzymes by recombinant
CC techniques. A claimed method for generating glucose from soluble
CC cell oligosaccharides comprises contacting a sample (selected from
CC dairy products, fruit juice, detergent, textile, guar gum, animal
CC feed, plant biomass or waste product) containing oligosaccharides
CC (selected from maltose, cellobiose, lactose, sucrose, raffinose,
CC stachyose, verbascose, cellulose, starch, amylose, glycogen,
CC disaccharides, polysaccharides and pullulan) with one of the
CC claimed glycosidases such that glucose is produced.

PT Endoglucanase(s), preferably from archaeal bacterium, AEPII la -
PT useful to degrade carboxymethylcellulose and hydrolyse of
PT beta-1,4-glycosidic bonds in cellulose
PS Claim 1; Fig 1W; 164pp; English.
CC This protein comprises an endoglucanase of Pyrococcus furiosus
CC (Clone 7EG1) that is capable of degrading carboxymethylcellulose
CC and of hydrolysing the beta-1,4-glycosidic bonds in cellulose. It
CC has homology to an endoglucanase of archaeobacterium AEPIIa (see
CC W34985). It can be produced from native cells or from recombinant
CC host cells, especially prokaryotic host cells transformed with a
CC plasmid or virus-derived vector including the endoglucanase DNA
CC (see 194215). 24 Endoglucanases (see W34986-W35008) are claimed.
CC They can be used to degrade cellulose for the conversion of plant
CC biomass into fuels and chemicals, for use in detergents, textiles,
CC animal feed, waste treatment, and in the fruit juice and brewing
CC industries for the clarification and extraction of juices.

Statistics: Mean 20.558; Variance 70.547; scale 0.291

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT Prepn. of cephalosporin series antibiotics - comprises culturing
PT transformant of microbe transformed by plasmid contg. new DNA
PT fragment
PS Disclosure; Fig 13; 67pp; Japanese.
CC This protein is encoded by ORF1 of the 23666bp sequence
CC isolated from L.lactamgenus and comprising the genes for the
CC cephalosporin biosynthetic enzymes listed in the KEYWORDS. Plasmids
CC containing at least one of ORF's 1-9 can be used to transform
CC microbes, such as bacteria or yeast.
CC See also Q10191-2.

 DR Prochymosin and aspartyl-phenylalanine polymer fusion protein and
 PT DNA - for prodn. of protein using microorganism.
 PS Claim 2: Page 7-8; 1pp; Japanese.
 CC This sequence represents a fragment of prochymosin. The DNA
 CC encoding this sequence may be linked to a further DNA fragment
 CC encoding a peptide in which aspartic acid and phenylalanine are
 CC repeated mutually at the C-terminal of the peptide. The fusion
 CC sequence may be included in a plasmid which is used to transform a
 CC microorganism. This allows preparation of aspartylphenylalanine (DF)
 CC efficiently.

 PI Samal BB, Stabinsky Y;
 DR WPI; 88-292865/41.
 DR New purified serine protease -
 PT isolated from culture medium of fungus Triticarium album or
 PT produced by recombinant DNA techniques
 PS Disclosure: Fig 9a-9c; 74pp; English.
 CC Fig. 9 represents a comparison of the AA sequences of protease TW3 with
 CC those of proteinase K, subtilisin novo, subtilisin Carlsberg, subtilisin
 CC DY and thermolysin. The AA sequence of the mature TW3 protein
 CC as determined from the nucleotide sequence has approximately 90%
 CC homology with that of proteinase K. There are certain positions where
 CC the TW3 AA sequence resembles that in subtilisins, but not to proteinase
 CC K. For example, at positions 143, a methionine residue occurs in all
 CC subtilisins as well as in protease TW3, while a leucine residue is
 CC present at that position in proteinase K. Similarly at position 219, an
 CC alanine residue is present in protease TW3 and subtilisins, but not in
 CC proteinase K. In addition, the AA fragment, Ser-Thr-, is absent from
 CC proteinase K while being present in the other enzymes (see p80847-50 and
 CC p80851) at position 226 and 227. Purified serine protease (SP), can be
 CC used in detergents and cleansers or spot removers, as a depilatory in
 CC tanning and also in the food industry for the prepn. of protein

CC hydrolysates and in serology for the detection of incomplete antibodies.

 DT DNA fragment having region specific for lactic acid bacteria -
 PT is contained in plasmid in microorganism used in prodn. of
 PT protein and food prodn. eg cheese.
 PS Disclosure: p: Dutch.
 CC The DNA encoding prochymosin can be cloned into a plasmid (esp. from
 CC S. cremoris SK112) and used to produce large ants of the protein by
 CC recombinant DNA techniques. This could overcome shortages of prochymosin
 CC due to a shortage of calf stomachs and increasing cheese prodn.
 CC Prochymosin is also used in prodn. of yoghurt, butter and buttermilk.
 CC See also P94145 and P94146.

 PT Expression plasmid comprising prochymosin gene and vector -
 PT useful for transforming Escherichia coli for prochymosin prodn.
 PS Disclosure: Fig 1; 59pp; English.
 CC The inventors claim the prochymosin gene comprising a nucleotide
 CC sequence from (a) the 1st codon (GCT) to the 365th codon (ATC), or
 CC the 5th codon (CGG) to the 365th codon (ATC); and recombinant
 CC plasmids harboured by Escherichia coli strains deposited as FERM BP-
 CC 262, -263 and -264. Any portion of the nucleotide sequence as
 CC described in N40055 can be used. Also claimed is a vector derived
 CC from plasmid pBR322. Typically plasmid pCR501 is obt'd. from pOCT 2.
 CC The transcriptional direction of pOCT 3 is opposite to that of
 CC pOCT 2; it is clockwise in pOCT 2 (5' to 3') whereas counter
 CC clockwise in pOCT 3.

 PT Isolated chymosin or rennin and prochymosin genes - plasmid(s)
 PT which replicate in prokaryotic organisms, esp. Escherichia coli,
 PT and organisms used for chymosin biosynthesis
 PS Disclosure: Page 33-36; 43pp; French.
 CC The inventors claim isolated chymosin (rennin) and prochymosin genes
 CC from calves, and plasmids contg. the genes which are capable of
 CC replicating in a prokaryotic organism. The prokaryotic organism is
 CC pref. an Escherichia species, esp. E. coli p Gx 1225 (NRRL B-15061).
 CC The microorganisms transformed by the plasmid are also claimed.

 PT Isolating heterologous polypeptide from bacterial inclusion
 PT bodies - by lysing cells, extn. with nonionic detergent and sepg.
 PT Insoluble polypeptide
 PS Disclosure: Fig 6: 21pp: English.
 CC The prorennin (prochymosin) sequence was deduced from the DNA
 CC sequence obt'd. by screening a cDNA library with rennin specific
 CC probes derived from the published amino acid sequence of rennin
 CC (Foltmann et al., J. Biol. Chem. 254, 8447-8456 (1979)) (see 223291.2).
 CC The deduced protein sequence was the same as the published sequence
 CC after cleavage of the signal peptide, except for an amino acid change
 CC at residue 218, which may be an artefact of protein sequencing in
 CC the original sequence. The cleavage product of prorennin, rennin is
 CC synthesised in two active forms rennin A, and rennin B. The cleaved
 CC secreted protein undergoes activation in the acidic conditions of the
 CC stomach to generate mature rennin by two autocatalytic cleavage events.
 CC Rennin is an active component of rennet which is used to clot milk in
 CC the process of making cheese.
 CC See also R22417.

COMMENT        This enzyme has more restricted specificity than pepsin A.
COMMENT        The enzyme is activated in a two-step process that gives rise to
                two end products. The shorter, Ser-gastricsin, is the major
                product.

COMMENT The sequence of variant B is shown.
COMMENT Chymosin is synthesized in the mucosa of the abomasum (fourth stomach) of young (unweaned) ruminants. The enzyme hydrolyzes casein to paracasein.
COMMENT Forms A and B are probably allelic variants. Chymosin B is the predominant form.

Statistics: Mean 27.984; Variance 41.624; scale 0.672

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT Glycosidase enzymes from organisms of the genera Staphylothermus,
PT Pyrococcus and Thermococcus - for deriving sugar from
PT oligosaccharides, useful in the e.g. food processing, textile or
PT baking industries
PS Claim 1: Fig 16a-c; 92pp; English.
CC This is the amino acid sequence of glycosidase MSB8-6GB4, deduced
CC from a polynucleotide (see V36922) of clone 6GB4 of Thermotoga
CC maritima MSB8 that grows optimally at 85 degC in high salt medium.
CC The invention provides 18 polynucleotides (see V36907-24) coding
CC for thermostable glycosidases (see W49858-75) having glucosidase,
CC alpha-galactosidase, beta-galactosidase, beta-mannosidase,
CC beta-mannanase, endoglucanase or pullulanase activity. Vectors and
CC host cells are also claimed. A method is provided for producing
CC generating glucose from soluble cell oligosaccharides comprises
CC contacting a sample (selected from dairy products, fruit juice,
CC detergent, textile, guar gum, animal feed, plant biomass or waste
CC product) containing oligosaccharides (selected from maltose,
CC cellobiose, lactose, sucrose, raffinose, stachyose, polysaccharides
CC and pullulan) with one of the claimed glycosidases such that glucose
CC is produced.

DR Enhancing expression of nucleic acids in cells - by using modified
PT vectors which comprise the nucleic acid and also nucleic acid
PT encoding a translation factor
PT Example 1; Fig 6A-B; 90pp; English.
PS This polypeptide comprises the K3L translation factor of vaccinia
CC virus. K3L and E3L (see W30564) play a role in the regulation of
CC viral translation. Both are capable of inhibiting the action of
CC a cellular protein kinase (PKR) which, when activated by double
CC stranded (ds) RNA, phosphorylate the translational initiation
CC factor eIF-2alpha, leading to an inhibition of initiation of mRNA
CC translation. Novel vectors of the invention, including ALVAC
CC vectors (see V58245) include K3L and E3L sequences, and are used
CC for enhancing expression of gene products that they encode. The
CC effect of the translation factors is to increase the effective
CC concentration of dsRNA. An up-regulation of foreign gene
CC expression can have a profound effect on the induction of a
CC therapeutic or immunological response in a host administered or
CC inoculated with recombinants derived from these new vectors,
CC thereby providing an enhanced immunological, e.g. protective,
CC response, or an enhanced therapeutic response.

PT New recombinant pox-virus with enhanced sensitivity to interferon
PT - lacks open reading frame conferring interferon resistance and
PT vaccines contg. the virus may be inactivated by administering
PT interferon
PS Disclosure; Fig 1; 32pp; English.
CC This sequence is encoded by the K3L gene of vaccinia virus (VV).
CC Within the scope of the invention the expression of this protein is
CC disrupted. The strain of VV used was the Copenhagen strain. The
CC mutant VP872 was derived from this by specific deletion of the K3L
CC open reading frame (ORF). The K3L ORF encodes a 10.5 kD protein.
CC VP872 was generated using the deletion plasmid pK3Lqpt. The 5' and 3'
CC sequences relative to the K3L ORF were derived by PCR. (See also
CC Q26737-40). The deletion of K3L from the VV resulted in an enhanced
CC sensitivity of viral-induced protein synthesis to interferon.

DR Enhancing expression of nucleic acids in cells - by using modified
PT vectors which comprise nucleic acid and also nucleic acid encoding
PT transcription factor and optionally translation factor
PT Example 2; Fig 8; 102pp; English.
PS This polypeptide comprises the K3L translation factor of vaccinia
CC virus. K3L and E3L (see W30571) play a role in the regulation of
CC viral translation. Both are capable of inhibiting the action of
CC a cellular protein kinase (PKR) which, when activated by double
CC stranded (ds) RNA, phosphorylate the translational initiation
CC factor eIF-2alpha, leading to an inhibition of initiation of mRNA
CC translation. Novel vectors are provided for enhanced expression of
CC at least 1 first nucleic acid molecule (NAM) in a cell of
CC particular phenotype. The vector (e.g. NIVAC or ALVAC) is modified
CC to comprise the first NAM and at least 1 second NAM encoding a
CC transcription factor (TF), or a TF and a translation factor such as
CC K3L and E3L, where there is co-temporal expression of the first
CC and second NAMS with respect to the phenotype of the cell, and
CC where expression of the second NAM enhances expression of the first
CC NAM by enhancing transcription or translation and translation.
CC Also claimed is a method for increasing expression of at least 1
CC first NAM by such a vector. The vectors can be used for increasing
CC expression of e.g. an epitope of interest, a biological response
CC modulator, a growth factor, a recognition sequence, a therapeutic
CC gene or a fusion protein.

PT New polynucleotides encoding secreted human proteins - derived from
PT human foetal brain, adult brain, foetal kidney, adult ovary, adult
PT retina, adult placenta or adult uterus cDNA libraries
PS Claim 13: Page 76-79: 127pp; English.
CC This sequence represents a human secreted protein of the invention.
CC The DNA encoding this sequence was isolated from a human adult ovary cDNA
CC library, and was designated clone aw92_1. The DNAs and proteins
CC are predicted to have biological activities which would make them
CC suitable for treating, preventing or ameliorating medical conditions in
CC humans and animals, although no supporting data is given. Suggested
CC activities include nutritional sources or supplements, immune
CC stimulating or suppressing activity, haematopoiesis regulating activity,
CC tissue growth activity, activin/inhibin activity,
CC chemotactic/chemokinetic activity, haemostatic and thrombolytic activity,
CC receptor/ligand activity, anti-inflammatory activity, cadherin/tumour
CC invasion suppressor activity, and tumour inhibition activity. The DNAs
CC are also stated to be useful for gene therapy. A host cell transfected
CC with the DNA, or its subfragments and variants is useful for recombinant
CC production of the human secreted protein clones.

PT Expression of heterologous RNA in bone marrow cells - using a
PT recombinant alphavirus comprising a promoter operable in bone marrow
PT cells operably associated with heterologous RNA.
PS Example 2: Fig 2B; 68pp; English.
CC The present sequence represents the South African Arbovirus strain
CC No. 86 (S.A.AR86) E1 protein sequence. The E1 protein is
CC encoded by the S.A.AR86 cDNA (V33473) as part of a structural
CC polypeptide. The invention provides a method for introducing and
CC expressing heterologous RNA in bone marrow cells using alphavirus
CC vectors. The S.A.AR86 is an alphavirus whose cDNA sequence was
CC determined from uncloned reverse transcriptase-PCR reaction fragments
CC amplified from the virion RNA. The inventors claim the transformed
CC bone marrow cells are useful for expressing a protein or peptide
CC suitable for protecting the subject against a disease such as a
CC microbial, bacterial, protozoal, parasitic or viral disease. The
CC transformed bone marrow cells are also claimed to be useful for
CC expressing proteins and peptides such as hormones, growth hormones,
CC growth factors, interleukins, cytokines, chemokines, enzymes, ribozymes
CC or antisense oligonucleotides.

 CC Proteins W04657-W02720 represent a range of G-protein coupled receptor
 CC (GPR) proteins selected from cAMP, adenosine, muscarinic acetylcholine,
 CC adrenergic, thrombin, endothelin, bombesin, endocrine, rhodopsin, opsin,
 CC odorant, cytomagaloviral and other GPR proteins. The peptides
 CC W03578-W03651 represent the N-terminal fragments of the above proteins.
 CC The receptor proteins were used to design polypeptides, pref. based on
 CC the transmembrane domains, for use in G-protein coupled receptor ligand
 CC binding assays. The polypeptide fragments retain biological activity
 CC such as binding a GPR ligand or modulating GPR ligand binding to a GPR
 CC (see W02747-W02999 for examples of polypeptide fragments).
 CC The polypeptide fragments can be used in compositions for treating
 CC subjects suffering from a pathology related to a GPR abnormality e.g. a
 CC psychotic disorder such as schizophrenia.

PT Separation of selected molecules, e.g. DNA, from complex mixtures - uses specific apparatus to allow the selected molecule to bind to motor proteins, and be actively transported and separated away along microtubules
PS Claim 3; Column 25-28; 24pp; English.
CC A method has been developed of separating a selected molecule from a mixture of molecules. The method comprises: (a) a separation device comprising a loading reservoir and a receiving reservoir coupled by a channel with microtubules immobilised on its surface and aligned parallel to a longitudinal axis of the channel; (b) loading the loading reservoir with an aqueous solution of the mixture of molecules; (c) adding a motor-ligand composition and ATP to the solution, where the motor-ligand comprises, (i) a processive motor capable of attaching to the immobilised microtubules, and moving in the presence of ATP as source of chemical energy, and (ii) a ligand coupled to the motor protein, where the ligand is capable of binding the selected molecule, so that the ligand binds the selected molecule and the motor protein attaches to the immobilised microtubules and transports the bound selected molecules along the receiving reservoir; and (d) removing the selected molecule from the receiving reservoir. The method and the system are used for the separation of specific molecules from complex mixtures. The molecule to

CC be separated (e.g. DNA) binds to the motor protein due to the presence of the specific binding ligands. Activation of these enables them to travel down a preformed channel in a specially made piece of apparatus. They can then be removed easily without contaminants of other mixture particles.
CC The present sequence represents the N-terminal 411 amino acid residues of Drosophila kinesin for use in the method of the invention.

COMMENT This enzyme is a soluble nucleotidase. It hydrolyzes IMP and other
purine nucleotides and is allosterically activated by various
compounds including ATP.
COMMENT This enzyme has a critical role in the maintenance of a constant
composition of intracellular purine/pyrimidine nucleotides in
cooperation with other nucleotidases.

MPSrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Thu Jul 8 18:12:39 1999; MasPar time 3.35 Seconds
Tabular output not generated. 84.327 Million cell updates/sec

Title: >US-09-041-236-2
Description: (62-71) from US09041236.pep (5 of 45)
Perfect Score: 83
Sequence: 1 KVLDFDFPEG 10

Scoring table: PAM 150
Gap 11

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0%
Listing first 45 summaries

Database: swiss-prot37
1:swissprot

Statistics: Mean 26.674; Variance 35.920; scale 0.743

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Statistics: Mean 25.426; Variance 40.341; scale 0.630

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

DR New GPI-anchored and soluble forms of p97 - for treating
PT disorders of iron metabolism, delivering drugs to the brain and
PT for diagnosis and treatment of Alzheimer's disease
PS Disclosure; Page 102-106; 166pp; English.
CC The melanoma-associated antigen p97 has been found to be a
CC GPI-anchored protein expressed on the cell surface which is able to
CC bind iron. A soluble form of p97 can be isolated from the aqueous
CC phase after Triton-X-114 phase separation. The soluble (hydrophilic)
CC form of p97 does not contain ethanolamine and it has a slower rate
CC of transport than GPI-anchored p97. The role of p97 in iron-
CC its agonists, antagonists and stimulants may be useful in treatment
CC of conditions where iron-metabolism is disturbed, e.g.
CC haemochromatosis and skin cancer. Expression of p97 (and
CC transferrin receptors) by reactive microglial cells associated with

CC senile plaques in Alzheimer's Disease (AD) provides a means of
CC diagnosing AD.

PT Hydrophilic composition containing enzyme, especially protease, and
PT glyceryl cocoate - stable for months at room temperature,
PT specifically used to debride wounds and promote their healing
PS Disclosure; Page 20-25; 31pp; English.
CC This is the amino acid sequence of vibriolysin, a new extracellular
CC neutral protease of Vibrio proteolyticus ATCC 53559. Vibriolysin
CC can be obtained by fermentation of V. proteolyticus, or by
CC cultivation of recombinant host cells, collecting the enzyme from
CC the culture broth. A claimed hydrophilic pharmaceutical
CC composition comprises an extracellular neutral protease produced by
CC vibrio and enough glyceryl cocoate to maintain enzymatic activity
CC at over 80% for at least 100 days at room temperature. The
CC composition is used to debride wounds and to promote wound healing,
CC more generally to remove any necrotic and/or non-viable tissue.
CC Particular applications are treatment of burns, bone fractures,
CC surgical abrasions, bed sores, slowly healing ulcers, tendonitis,
CC bursitis, vaginitis, cervicitis, circumcision, episiotomy,
CC pilonidal cyst warts, carbuncles, sunburn and frostbite (claimed).
CC Vibriolysin is able to hydrolyse components of eschar (including
CC denatured collagen, elastin and fibrin) but does not damage native
CC tissue.

PT Protease compsn. for wound treatment - contains protease from

PT Vibrio, esp. V proteolyticus, which hydrolyses components of
PT necrotic tissue but not native tissue
PS Disclosure: Fig 1: 23pp; English.
CC The vibriolysin protease can be produced by aerobic fermentation of
CC Vibrio species in nutrient medium. The protein sequence was
CC deduced from the DNA sequence obt'd. by cloning the Vibrio protease
CC from chromosomal DNA. Vibriolysin hydrolyses components of necrotic
CC tissue including denatured collagen, elastin and fibrin, while viable
CC living tissue is not injured. It causes wound debridement and
CC stimulates vascularisation and healing of traumatised tissue. The
CC protease can be used in management of full and partial thickness
CC wounds, burn wounds, debridement of ulcerative lesions, principally
CC pressure (decubitus) ulcers and varicose stasis and trophic ulcers,
CC prepn. of skin graft sites and general surgical wounds such as
CC amputation, incisional, traumatic and pyogenic wounds and for the
CC treatment of vaginitis, cervicitis, circumcisions, epistomy, cyst
CC wounds, carbuncles, sunburn, frostbite and cataract scar tissue.

PT Transgenic potato plants with improved cold storage characteristics
PT - are modified plants with reduced alpha glucan L or H type
PT phosphorylase activity, and have reduced cold sweetening
PS Disclosure: Page 58-61; 91pp; English.
CC The sequence is that of alpha-glucan H-type tuber phosphorylase
CC which can be used in the production of a potato plant with
CC improved tuber cold-storage characteristics. Such plants can be
CC used in agricultural potato production. The potatoes are especially
CC useful in the manufacture of potato chips. The method reduces
CC cold-sweetening (conversion of starches to sugars), resulting
CC in the ability to store potatoes cooler temperatures. This
CC produces prolonged dormancy, reduced incidence of disease and
CC increased storage life. The potatoes also have improved specific
CC gravity and improved chip score.

PT Preparation of recombinant polypeptides - by expression of a fusion
PT protein comprising a pro-peptide derived from an autocatalytically
PT maturing zymogen and a heterologous polypeptide
PS Example 2; Fig 2; 44pp; English.
CC The present sequence represents a fusion protein comprising a His
CC tag-bovine chymosin pro-peptide-carp growth hormone. The fusion
CC protein was made to exemplify the invention. The specification describes
CC a method for preparing a recombinant polypeptide in a host cell. A
CC chimeric nucleic acid sequence encoding a fusion protein comprising
CC a pro-peptide derived from an autocatalytically maturing zymogen linked
CC to a protein heterologous to the pro-peptide, is introduced into the host
CC cell. The host cells are then grown to produce the fusion protein.
CC Altering the environment of the fusion protein allows cleavage of the
CC pro-peptide from the fusion protein to release the recombinant
CC polypeptide. The method can be used for the preparation of recombinant
CC polypeptides such as hirudin or carp growth hormone. The fusion
CC proteins can be used for delivering to a human or animal a therapeutic
CC or nutritional polypeptide such as a vaccine, a peptide antibiotic, a
CC cattle feed enzyme, a cytokine, a gastric lipase or a lactase.

PT Purified yeast sorbitol dehydrogenase - used for isolating gene
PT regulatory sequences for use in expressing heterologous
PT polypeptide(s) in yeast
PS Claim 27; Page 31-34; 60pp; English.
CC This sequence (R56479) is that of sorbitol dehydrogenase.
CC The presence of eleven amino acids of the sorbitol dehydrogenase
CC from its N-terminal in a fusion polypeptide results in several fold
CC higher levels of expression of the fused polypeptides as compared to
CC the unfused polypeptide. The DNA encoding the enzyme is shown in
CC Q66579, it is useful for its regulatory elements. These can be used
CC in yeast hosts for the production of heterologous proteins, eg.
CC superoxide dismutase or the hepatitis delta antigen.

 CC -1- FUNCTION: INVOLVED IN IRON CELLULAR UPTAKE. SEEMS TO BE
 CC INTERNALIZED AND THEN RECYCLED BACK TO THE CELL MEMBRANE. BINDS A
 CC SINGLE ATOM OF IRON PER SUBUNIT. COULD ALSO BIND ZINC.
 CC -1- SUBCELLULAR LOCATION: ATTACHED TO THE MEMBRANE BY A GPI-ANCHOR.
 CC CERTAIN FETAL TISSUES; ALSO FOUND IN LIVER, EPITHELIUM, UMBILICAL
 CC CHORD, PLACENTA AND SWEAT GLAND DUCTS.
 CC -1- DOMAIN: COMPOSED OF TWO HOMOLOGOUS DOMAINS.
 CC -1- SIMILARITY: BELONGS TO THE TRANSFERRIN FAMILY.

 DT Antimicrobial (poly)peptide(s) from bovine and murine granulocytes -
 PT useful therapeutically, as preservatives for food, in water
 PT treatment and in agriculture.
 PS Claim 8; Fig 4; 56pp; English.
 CC This protein comprises the precursor (see W23722) of a novel,
 CC claimed antimicrobial peptide from bovine neutrophils, designated
 CC bovine granulocyte peptide A or BGP-A (see W23724). Its amino acid
 CC sequence was deduced from a cDNA clone (see T78509) obtained from
 CC bovine bone marrow. BGP-A and the murine homologue, MGP-A (see
 CC W23725), exhibit activity against Gram-positive and Gram-negative
 CC bacteria, fungi and viruses, specifically Staphylococcus aureus, and C.
 CC Escherichia coli, Candida albicans, Salmonella typhimurium and C.
 CC neofarmans (claimed). They can be used in human or veterinary
 CC medicine (particularly to treat disorders associated with
 CC lipopolysaccharides, e.g. sepsis and endotoxaemia) or as
 CC preservatives in food products or in water supplies (claimed).
 CC They can also be applied to crops to reduce post-harvest spoilage
 CC or expressed in transgenic plants to increase their disease
 CC resistance. They have low immunogenicity. Carboxamidated
 CC analogues of BGP-A and MGP-A may also be used.

PT Regulatory factor that activates nitrilase gene promoter - and Rhodococcus transformants with increased nitrilase activity, for converting nitrile(s) to organic acids
PS Claim 1; Page 7-8; 13pp; English.
CC A regulatory factor (W12377) that activates the nitrilase gene promoter of Rhodococcus rhodochrous J1 has been identified. The gene (T63225) coding for the regulatory factor is located just downstream of the nitrilase structural gene. The regulatory factor can be used to increase nitrilase expression in Rhodococcus transformants, thus increasing prodn. of an organic acid from its corresp. nitrile. The activity of the regulatory factor is enhanced by the presence of a nitrile, esp. isovaleronitrile.

PT Adducts of apoprotein polypeptide and chromophore as label,

PT particularly for bio-molecules - used as fluorescent markers in
 PT immunoassays, nucleic acid hybridisation, detecting protein-protein
 PT interaction etc., are stable with high molar absorption
 PS Example 4: Fig 10B; 87pp; English.
 CC This polypeptide comprises cyanobacterial phytochrome 1 (Cph1) of
 CC Synechocystis sp. PCC6803. Its amino acid sequence was deduced
 CC from locus sir0473 genomic DNA. Expression of the 748-residue
 CC polypeptide in *E. coli* and incubation with phycocyanobilin yields
 CC an adduct with a red, far-red photo-reversible phytochrome
 CC signature. The invention provides a new class of fluorescent
 CC protein adducts (designated phytofluors) that are generally suitable
 CC for use as fluorescent markers. They comprise a protein component
 CC (an apoprotein) and a bilin chromophore such as phycoerythrobilin.
 CC Preferred apoproteins are obtained from plants, e.g. oats (see
 CC W50144), from green algae, e.g. *Mesotaelium caldarium* (see
 CC W50145), or cyanobacteria such as *Synechocystis*. Truncated
 CC apoproteins consisting of the N-terminal chromophore domain are
 CC especially preferred. Recombinant apoproteins assemble
 CC spontaneously with the bilin chromophore. Claimed compositions
 CC comprise a protein, glycoprotein, antibody or nucleic acid to be
 CC detected linked to the fluorescent adduct. They are used in assays
 CC for detecting the other member of a specific binding pair, e.g.
 CC immunoassay of antigens, immuno-histochemical labelling, as nucleic
 CC acid probes for Southern blotting, for identification of manufactured
 CC products, also to detect protein-protein interactions, including
 CC studies on intracellular protein localisation and identification of
 CC transfected cells. The phytofluors make ideal fluorescent markers
 CC because they have a long wavelength absorption maximum and high
 CC molar absorption coefficient, and are stable to light and pH.

 DR New nucleic acid encoding the TRIO phosphoprotein - used for
 PT diagnosis and treatment of proliferative and neurodegenerative
 PT diseases
 PS Claim 2: Page 93-103; 141pp; English.
 CC This protein sequence comprises the novel multidomain human
 CC phosphoprotein TRIO, which is suggested to be a central organiser of
 CC multiple signaling pathways, to be involved in the activation of
 CC oncogenes such as c-fos, and to induce transformation of cells.
 CC The amino acid sequence was deduced from a composite of cDNA clones
 CC obtained from human WI-38 fibroblast cDNA by interaction trap assay.
 CC TRIO mRNA was expressed in all 8 human tissues examined. Once
 CC isolated, TRIO DNA can be expressed in usual host/vector systems to
 CC produce recombinant TRIO polypeptides, e.g. for antibody production
 CC or screening for modulators of activity. Labelled antibodies that
 CC bind TRIO specifically can be used to detect/quantify TRIO activity,
 CC particularly for diagnosis and phenotyping of neoplastic or
 CC hyperplastic disease. Modulators of TRIO activity (e.g. antisense
 CC nucleic acids, antibodies, peptides or mimetics) can be used to
 CC reorganise the actin cytoskeleton (claimed), e.g. in cases of wound
 CC healing and/or tumour metastasis, to treat an oncogene (claimed),
 CC or more generally to control growth, differentiation, migration
 CC and/or survival of cells, e.g. regulation of the immune response to
 CC infection, treatment of impaired immune response (as in chronic
 CC granulomatous disease), control of apoptosis in cancer therapy, and
 CC treatment of degenerative diseases (e.g. Parkinson's, Alzheimer's
 CC or Huntington's, amyotrophic lateral sclerosis, gastric ulcers,
 CC Wilm's tumour etc.). Transgenic animals can be used as models to
 CC characterise TRIO genes and proteins.

 PT Pineapple, papaya and mango ACC synthase genes - used in gene
 therapy to produce fruits with reduced senescence
 PS Disclosure: Fig 3: 46pp; English.
 CC This sequence represents a novel protein, capacc2, encoded by a member
 of an ACC synthase multigene family found in papaya. The enzyme ACC
 synthase is involved in the pathway for ethylene biosynthesis and the
 rate of endogenous expression of ACC synthase is considered to limit
 CC substantially the rate of ethylene production. Endogenous ethylene is
 often deleterious to crops, especially if some form of mechanical
 CC wounding has occurred and diminishes their post harvest quality and
 CC storage life. Novel ACC synthase genes expressed in transgenic plants
 CC using either sense or antisense expression system may be used to control
 CC the regulation of plant development, in particular fruit ripening,
 CC reducing senescence and thus improving storage life.

 PT Identification of modulators of integrin binding to proteasome
 PT subunit TRAP2-26S - which are used for regulating immune and
 PT inflammatory responses
 PS Example 1: Page 14-16; 23pp; English.
 CC A polypeptide (W19771) has been identified that interacts with a
 CC beta-1 integrin. Its amino acid sequence was deduced from cDNA
 CC clone B171 (T72795) that was isolated using a two-hybrid system in
 CC yeast to screen for products of a human B cell cDNA library which
 CC interacted with the C-terminus of the cytoplasmic tail of the
 CC beta-1 integrin subunit. The B171-encoded polypeptide shows high
 CC sequence identity to TRAP2, 26S proteasome subunit p97 and 55.11
 CC binding protein. Modulators of beta-1 integrin/TRAP2 interaction
 CC can be used in vivo or in vitro to affect inflammatory processes
 CC involving lymphocytes. Modulators that bind to either the beta-1
 CC integrin or TRAP2 are useful to monitor the level of its binding
 CC partner, either in a body fluid or biopsy sample.

 PT TNF-NGF receptor superfamily intracellular domain-binding proteins -
 PT useful for modulating receptor function, e.g. for treating tumours
 PT or HIV-infected cells
 PS Claim 21; Fig 1d; 96pp; English.
 CC Novel human protein 55.11 (R88616) binds to the intracellular (IC)
 CC domain of tumour necrosis factor receptor (TNF-R) protein p55. It
 CC is obtd. by expression in transformant hosts of 55.11-encoding cDNA
 CC (T03730) isolated from fetal liver and Hela cells. 55.11 can be
 CC used to modulate TNF-R function in the treatment of tumours or
 CC HIV-infected cells, or for the affinity purifn. of other proteins
 CC capable of binding the IC domain of the TNF/NGF receptor
 CC superfamily.

 PT Human 26S proteasome component P100 protein - acts to decompose
 PT ubiquitin binding protein, for use in diagnosis and treatment of
 PT cancer
 PS Claim 1: Page 8-11; 15pp; Japanese.
 CC This sequence represents the human 26S proteasome component P100
 CC protein. The proteasome is a multifunctional protease ubiquitous in
 CC eucaryotes ranging from yeasts to human. The 26S proteasome is known to
 CC decompose oncogene products and a significant expression of a proteasome
 CC gene is known to occur in cancer cells in liver, kidney. Elucidation of
 CC the functions of the proteasome will contribute to the diagnosis and
 CC treatment of the conditions such as malignant tumour in which
 CC proteasomes are thought to be involved.

PT Herpes simplex virus type-2 sequences - useful in, e.g. prevention
PT and treatment of infection or inducing immunological response in
PT mammal
PS Claim 10: Page 138: 748pp; English.
CC This sequence represents a Herpes simplex virus type-2 (HSV-2) protein
CC sequence of the invention. This sequence was isolated from a HSV-2 strain
CC SB5 (deposited as ATCC VR-2546) DNA fragment designated Contig ID 15.
CC Based on homology, this sequence is a neural variant mena+ protein.
CC The proteins can be used for the treatment or prevention of disease, to
CC induce an immunological response in a mammal or to identify inhibitors,
CC activators or novel antivirals. Antagonists of the proteins can be used
CC to inhibit a viral polypeptide. The DNA sequence or a vector containing
CC it can also be used to induce an immunological response in a mammal.

PT New DNA fragment - contg. base sequence coding aryl-malonate
PT decarboxylase
PS Claim 1; Page 2; 12pp; Japanese.
CC Genomic DNA was isolated from A.bronchisepticus KUI201 and
CC fragmented by restriction enzyme digestion. Fragments were ligated

```

```

CC to pUC19 and recombinant plasmids were used to transform competent
CC E.coli DH5alpha-MCR cells. The plasmid pAMD100 was isolated from a
CC transformant which expressed aryl malonate decarboxylase activity.
CC R45391 is the amino acid sequence of the AMDase encoded by the
CC plasmid insert.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Thu Jul 8 18:17:05 1999; MasPar time 3.44 Seconds

Tabular output not generated. 65.831 Million cell updates/sec

Title: >US-09-041-236-2
Description: (105-112) from US09041236.pep (7 of 45)
Perfect Score: 57
Sequence: 1 SEGLIACG 8

Scoring table: PAM 150
Gap 11

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0%
Listing first 45 summaries

Database: swiss-prot37
1:swissprot

Statistics: Mean 22.517; Variance 23.231; scale 0.969

pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

CC -!- FUNCTION: NECESSARY FOR EFFICIENT ENTRY OF S.TYPHIMURIUM INTO
CULTURED EPITHELIAL CELLS. PROBABLE CATALYTIC SUBUNIT OF A PROTEIN
TRANSLUCASE. MAY ENERGIZE THE PROTEIN EXPORT APPARATUS ENCODED IN
THE INV LOCUS WHICH IS REQUIRED FOR THE SURFACE PRESENTATION OF
DETERMINANTS NEEDED FOR THE ENTRY OF SALMONELLA SPECIES INTO
MAMMALIAN CELLS.
CC -!- SUBCELLULAR LOCATION: CYTOPLASMIC (POTENTIAL).
CC -!- SIMILARITY: TO OTHER TRANSPORT APPARATUS ATPASES AND TO ATPASE
BETA SUBUNIT.

CC -!- FUNCTION: REQUIRED FOR SURFACE PRESENTATION OF INVASION PLASMID
CC ANTIGENS. PROBABLE CATALYTIC SUBUNIT OF A PROTEIN TRANSLOCASE.
CC REQUIRED FOR INVASION AND FOR SECRETION OF THE THREE IPA PROTEINS.
CC -!- SUBCELLULAR LOCATION: CYTOPLASMIC (POTENTIAL).
CC -!- SIMILARITY: TO OTHER TRANSPORT APPARATUS ATPASES AND TO ATPASE
CC BETA SUBUNIT.

Statistics: Mean 16.136; Variance 51.948; scale 0.311

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT DNA sequence of Bx1 gene - used to confer resistance on plants
PT with low or no levels of benzoxazine(s)
PS Claim 1; Fig 2; 28pp; English.
CC The protein is involved in the biosynthesis of benzoxazines,
CC which are used by plants as a poison / deterrent on insects and
CC microorganisms. The protein can be expressed in transformed plants,
CC enhancing their ability to combat infection.

 PT Human breast cancer related genes - used for diagnosis,
 PT pre-symptomatic detection and therapy of breast and ovarian cancers
 PS Claim 2; Fig 3e; 96pp; English.
 CC The proteins encoded by human breast cancer related genes, L-oncogenes
 CC (V17738-V17753) can be used in the diagnosis and treatment of breast and
 CC ovarian cancer. Antibodies and multiple antigenic peptide epitopes can
 CC be used to detect the presence of the proteins. The antibodies can also
 CC be used to block the activity of the protein. Antisense molecules can be
 CC used to prevent expression of the proteins.

 PT New compositions for immuno-therapy and protection - comprise
 PT nucleotide sequences encoding an immuno-modulating protein and an
 PT antigen, used for e.g. infections, cancer or auto-immune diseases
 PS Example 6; Fig 14; 136pp; English.
 CC The present sequence represents the protein from the third reading
 CC frame of human immunomodulatory protein BL-1 encoding cDNA (given in
 CC V30915). The present invention describes a plasmid which comprises a
 CC nucleotide sequence (NS) that encodes: (a) an immunomodulating protein
 CC selected from interleukin (IL)-12, granulocyte-macrophage colony
 CC stimulating factor (GM-CSF), IL-1, tumour necrosis factor (TNF)-alpha,
 CC TNF-beta, IL-2, IL-4, IL-5, IL-10, IL-15, IL-18 and BL-1 operably
 CC linked to regulatory elements. Products of the present invention can be
 CC used to induce an immune response to an antigen such as a pathogen
 CC antigen, a hyperproliferative disease-associated antigen, and antigen

CC linked to cells associated with autoimmune diseases or an allergen.
 CC They can be used for immunotherapy or to provide a protective immune
 CC response. In particular, they can be used for treating subjects with
 CC an allergic reaction, pathogen infection, hyperproliferative disease
 CC such as cancer or psoriasis or autoimmune diseases e.g. rheumatoid
 CC arthritis, multiple sclerosis, Sjogren's syndrome, sarcoidosis, insulin
 CC dependent diabetes mellitus, autoimmune thyroiditis, ankylosing
 CC spondylitis, scleroderma, polymyositis, dermatomyositis, psoriasis,
 CC vasculitis, Wegener's granulomatosis, Crohn's disease and ulcerative
 CC colitis, Grave's disease, autoimmune thrombocytopenia, asthma and
 CC pernicious anaemia.

 PT Nucleotide and protein sequences for human and rat nestin -
 PT distinguishes neural multipotential stem cells and brain tumour
 PT cells from more differentiated cell types; for use in the
 PT diagnosis of brain tumours
 PS Claim 4; Column 35-44; 45pp; English.
 CC This sequence is the rat nestin protein encoded by Q70447. Its
 CC degree of sequence homology to intermediate filaments in the core
 CC domain, its dissimilarity in the head and tail domains, and its
 CC different splicing pattern suggest that it defines a new class of
 CC intermediate filament protein. Nestin protein expression distinguishes
 CC neural multipotential stem cells and brain tumour cells from the more
 CC differentiated neural cell types (eg., neuronal, glial and muscle
 CC cells of the adult brain). The nestin protein can be used in diagnosing
 CC tumours of the brain, such as medulloblastomas, glioblastomas and
 CC oligodendroglioma. (See also R60127).

PT Isolated toxins from Photorhabdus luminescens strains - useful for

PT control of insect pests

PS Claim 34; Pages 276-281; 321pp; English.

CC The present sequence represents a protein named TccB of the bacterium

CC Photorhabdus luminescens (W-14). This is a symbiotic bacterium of the

CC nematodes of the Heterorhabditis genus. The bacterium has at least 4

CC distinct genomic regions, tca, tcb, tcc, and tcd. Peptide products are

CC produced from these regions that are associated with insecticidal

CC activity. The native toxins are secreted proteins. The proteins are

CC toxic to insects upon exposure and especially when ingested. The

CC nucleic acid sequence can be used to produce transgenic plants,

CC baculoviruses or microbial hosts for toxin production. They can be used

CC to control insects pests from the Lepidoptera, Coleoptera, Hymenoptera,

CC Diptera, Dictyoptera, Acarina or Homoptera orders, especially the

CC Southern or Western corn rootworm, Colorado potato beetle, mealworm,

CC boll weevil, turf grub, beetle armyworm, black cutworm, cabbage looper,

CC codling moth, corn earworm, European corn borer or tobacco hornworm

CC or budworm.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RL PROC. NATL. ACAD. SCI. U.S.A. 90:6071-6075(1993).
CC -!- FUNCTION: ACTIVATES UBIQUITIN BY FIRST ADENYLATING WITH ATP ITS
CC CARBOXY-TERMINAL GLYCINE RESIDUE AND THEREAFTER LINKING THIS
CC RESIDUE TO THE SIDE CHAIN OF A CYSTEINE RESIDUE IN E1, YIELDING
CC AN UBIQUITIN-E1 THIOLESTER AND FREE AMP.
CC -!- PATHWAY: FIRST STEP IN UBIQUITIN CONJUGATION.
CC -!- SUBUNIT: MONOMER (BY SIMILARITY).
CC -!- TISSUE SPECIFICITY: EXPRESSED IN A VARIETY OF NORMAL AND TUMOR
CC CELL TYPES, BUT IS REDUCED IN LUNG CANCER CELL LINES.
CC -!- THERE ARE TWO ACTIVE SITES WITHIN THE E1 MOLECULE, ALLOWING IT TO
CC ACCOMMODATE TWO UBIQUITIN MOIETIES AT A TIME, WITH A NEW UBIQUITIN
CC FORMING AN ADENYLATE INTERMEDIATE AS THE PREVIOUS ONE IS
CC TRANSFERRED TO THE THIOLE SITE.
CC -!- SIMILARITY: SOME, E.COLI MOEB/CHLN, THIF AND ANABAENA SP. HESA.
CC -!- SIMILARITY: TO E1 IN OTHER SPECIES.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT Nucleic acid encoding human inositol mono-phosphatase H1 polypeptide
PT - useful for producing recombinant polypeptide
PS Claim 1: Fig 1: 23pp: English.
CC The present sequence represents a human inositol monophosphatase-H1
CC (hIMP-H1) protein. The nucleotide sequence was isolated from a cDNA
CC library derived from human brain tissue. The hIMP-H1 protein is
CC structurally related to the inositol phosphatase family, and exhibits
CC the highest degree of homology to human inositol monophosphatase.
CC The cDNA sequence is cloned to produce recombinant vectors which
CC express a mature polypeptide, as well as its biologically active and
CC diagnostically or therapeutically useful fragments, analogues and
CC derivatives. The polypeptides or polynucleotides are used screening
CC and designing compounds capable of inhibiting a class of enzymes, and
CC the treatment of psychiatric disorders. The protein can be used to raise
CC antibodies or antagonists, which may be used to inhibit the action of
CC such proteins e.g. in the treatment of psychotic and depressive
CC disorders (bipolar and non-bipolar).

PT New isolated human inositol mono:phosphatase H1 and DNA - used to
PT develop prods. for the diagnosis and therapy of psychiatric
PT disorders, e.g. psychotic and depressive disorders
PS Claim 1; Page 35-36; 51pp: English.
CC The sequence represents mature human inositol-monophosphatase-H1,
CC encoded by a gene isolated from a human brain cDNA library. The
CC sequence contains a conserved sequence essential at the active site
CC of inositol-monophosphatases. The enzyme plays an important role
CC in the phosphatidylinositol signalling pathway by catalysing the
CC hydrolysis of inositol monophosphates, and may be the molecular
CC site of action for lithium therapy for manic depressive illness.
CC The enzyme may be used to screen drugs for inhibitor activity, for
CC use in therapy of psychiatric disorders, e.g. psychosis or manic
CC depression. The DNA may be used in mapping or gene therapy (e.g.
CC via triple helix or antisense strategies) of genetic disease.
CC Antibodies against the enzyme may be used as diagnostic or
CC therapeutic agents.

PT New isolated IMP-18p myo-inositol monophosphatase - used to develop
PT products for determining susceptibility to manic depressive illness
PT and as targets for preventive and therapeutic treatments
PS Claim 20; Fig 5; 118pp: English.
CC A method has been developed for determining a genotype associated with
CC increased susceptibility to manic-depressive (MD) illness. The method
CC comprises determining the genotype of an affected individual with at
CC least one polymorphic marker localised within the chromosomal region
CC defined by and including markers D18S843 and D18S869 and determining the
CC genotype associated with increased susceptibility to MD disorder. The
CC method can be used for determining susceptibility to MD illness
CC including bipolar disorder, genetic counselling of individuals from
CC families affected with MD illness, and aid in the differential diagnosis
CC of MD illness from other psychiatric pathologies. Products from the
CC present invention can also be used to obtain modulators of IMP-18p myo-
CC inositol monophosphatase protein activity and as targets for preventive
CC and therapeutic treatments. The present sequence represents the
CC specifically claimed IMP-18p myo-inositol monophosphatase protein
CC isolated from chromosome 18.

 PT Kidney injury-associated molecule, KIM, polypeptides - upregulated
 PT in injured or regenerating tissues, useful to promote tissue growth
 PT and regeneration, especially to treat renal conditions
 PS Claim 17; Page 131-132; 213pp; English.
 CC The present sequence represents a kidney injury associated molecule
 CC (KIM) protein. KIM proteins can be administered therapeutically
 CC by expressing KIM encoding polynucleotides, to promote growth and/or
 CC survival of damaged tissue (e.g. renal tissue), since the KIM proteins
 CC are upregulated in injured or regenerating (especially renal) tissues.
 CC KIM fusion proteins, conjugates, antibodies and vectors can also be used
 CC therapeutically, e.g. these or the KIM proteins may be included with an
 CC acceptable carrier in pharmaceutical compositions, useful for therapy/
 CC prophylaxis of conditions associated with dysfunction/disregulation of
 CC KIM genes or proteins, especially renal diseases or impairments of renal
 CC function in humans (e.g. acute renal failure, acute nephritis). The
 CC polynucleotides can be used to produce antisense sequences which, when
 CC internalised into cells, can disrupt expression of a cellular KIM gene,
 CC also useful in therapy (e.g. to block the growth of tumours dependent on
 CC KIM for growth) or compositions. The proteins and polynucleotides are
 CC useful diagnostically e.g. to detect and quantify renal injury/disease
 CC (indicative of increased risk, or presence of, renal injury or impaired
 CC function), or abnormal responses to tissue injury (indicative of
 CC increased risk, or presence of, an autoimmune response or abnormal
 CC tissue growth arising from/affecting renal tissue). The proteins can
 CC also be used to locate KIM-producing cells (especially specific loci,
 CC e.g. tissue masses abnormally producing/expressing KIM such as tumours
 CC arising from/affecting renal tissue), by contacting cells with an
 CC imageable KIM-binding reagent and imaging reagent accumulation.

PT Purified RNA polymerase II holoenzyme - comprises RNA polymerase II
 PT and one or more regulatory proteins, pref. suppressor of RNA
 PT polymerase B proteins or SWI/SNF proteins
 PS Claim 11; Fig 13; 154pp; English.
 CC Novel yeast SRB (suppressor of RNA polymerase B) proteins SRB4, SRB5,
 CC SRB6, SRB7, SRB8, SRB9, SRB10 and SRB11 (W13821-28) are transcriptions
 CC regulatory factors that act as positive and negative regulators of
 CC RNA polymerase II activity, and are components of the RNA polymerase
 CC II holoenzyme. They were identified using methods designed to
 CC identify transcription factors involved in RNA polymerase II
 CC C-terminal domain (CTD) function. Genomic clones (T59904-11) for
 CC the SRBs have been obtd. SRBs can be used to treat diseases
 CC resulting from alteration or deletion of the SRB gene, pref. by gene
 CC transfer technology. They can also be used in vitro
 CC transcription of DNA and to identify cpds. that modify gene
 CC transcription.

 PT Human G-protein parathyroid hormone receptor, HLTGDG74 - used to
 PT identify (ant)agonists, used in the treatment of hypo- or
 PT hyper-calcaemia, hypo- or hyper-phosphatemia, kidney stones, etc
 PS Claim 9; Fig 1A-E; 62pp; English.
 CC A novel 7-transmembrane receptor (W12695) has been identified as a
 CC human G-protein parathyroid hormone (PTH) receptor, designated
 CC HLTGDG74. It shows 48.2% homology to the human PTH receptor. Its
 CC amino acid sequence was deduced from a cDNA clone (T59619) isolated
 CC from a human T cell lymphoma tissue cDNA library. Recombinant
 CC HLTGDG74 can be produced in transformed host cells and used to
 CC screen for (ant)agonist cpds. Agonists may be used to prevent or
 CC treat e.g. hypocalcaemia, hyperphosphataemia, hypoparathyroidism
 CC and chronic tetany by stimulating an increase in serum calcium
 CC levels. Antagonists can be used to inhibit the receptor e.g. for
 CC the treatment of osteoporosis, hypercalcaemia, hypoparathyroidism,
 CC hypophosphataemia, kidney stone, nephrolithiasis.

 PT Inhibitor of integral membrane protein - used to treat e.g.
 PT schizophrenia, hypertension, viral infection, cancer etc.
 PS Claim 30; Page 97; 127pp; English.
 CC This sequence is a dopamine transporter protein antagonist, and is an
 CC antagonist of the invention. The antagonists (A) are for inhibiting the
 CC function of a prokaryotic or eukaryotic integral membrane protein (IMP)
 CC having at least one transmembrane domain (TMD), comprises a peptide
 CC including at least 4 consecutive amino acids (aa) from the sequence of
 CC the TMD. (A) are used to treat or prevent disorders in mammals that
 CC involve disturbances of IMP, and the same effect is achieved by inserting
 CC a nucleic acid encoding (A) into the cells of the mammal. Specified
 CC conditions that can be treated are schizophrenia, psychotic disorders,
 CC Huntington's disease, Tourette's syndrome, hypertension, post-myocardial
 CC infarction, tachyarrhythmia, human immunodeficiency virus infection,
 CC AIDS, cell proliferation (cancer, psoriasis or hyperkeratosis), and drug
 CC abuse. (A) can also be used to treat peptic ulcer, glaucoma, asthma,
 CC renal disease, Parkinson's disease, congestive heart failure, migraine,
 CC depression, obesity, diabetic neuropathy/retinopathy, autoimmune
 CC diseases, graft rejection etc. (A) can be used as diuretics and
 CC antibacterials. (A) may also be used to determine function of
 CC orphan receptors and, when attached to a marker, for tissue imaging to
 CC localise/quantify specific receptors. The transgenic animals are used to
 CC test efficacy/toxicity of (A) and as models of diseases. (A) are very
 CC specific and selective, against the IMP from which they are derived, so
 CC should have few side effects.

 PT New DNA encoding parathyroid hormone receptor, DNA and antibodies
 PT - for (differential) diagnosis of hypercalcaemia, and diagnosis
 PT and treatment of tumours
 PS Claim 25; Page 5; 91pp; English.
 CC The peptide sequence shown represents an extracellular fragment of
 CC a parathyroid hormone/parathyroid hormone related protein
 CC (PTH/PTHrP) receptor protein. The peptide is capable of binding
 CC PTH or PTHrP and acting as an antagonist of these cpds. The
 CC peptide may be used to inhibit activation of PTH or PTHrP and thus
 CC reduce the level of calcium in the blood. Cpds. capable of competing
 CC with PTH or PTHrP for binding can be identified using the protein prod.

CC and DNAs homologous to PTH DNA can be identified using fragments of the
CC clone as probes. The sequence may be used for the prodn. of antibodies
CC useful for the treatment, classification, prognosis and/or treatment of
CC disorders related to the interaction between a cell receptor and a
CC ligand such as in hypercalcaemia. See also R27704-16.

Listing first 45 summaries

Database: pir60
1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 23.858; Variance 36.127; scale 0.660

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

SUMMARIES

Tabular output not generated. 78.057 Million cell updates/sec

Title: >US-09-041-236-2
Description: (120-128) from US09041236.pap (9 of 45)
Perfect Score: 75
Sequence: 1 CWNLVNGTV 9

Scoring table: PAM 150
Gap 11

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0%
Listing first 45 summaries

Database: swiss-prot37
1:swissprot

Statistics: Mean 24.590; Variance 33.675; scale 0.730

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Run on: Thu Jul 8 18:23:01 1999; MasPar time 8.43 Seconds
Tabular output not generated.
58.242 Million cell updates/sec

Title: >US-09-041-236-2
Description: (120-128) from US09041236.pep (9 of 45)
Perfect Score: 75
Sequence: 1 CWNLVNGTV 9

Scoring table: PAM 150
Gap 11

Searched: 179066 seqs, 54579741 residues

Post-processing: Minimum Match 0%
Listing first 45 summaries

Database: sptrmb19
1:sp_archaea 2:sp_bacteria 3:sp_fungi 4:sp_human
5:sp_invertebrate 6:sp_mammal 7:sp_mhc 8:sp_organelle

PT New protein from Bombyx mori that binds bacterial
PT lipopolysaccharide - esp. used to treat septic shock, also DNA
PT encoding it, for producing transgenic plant(s) resistant to fungal
PT attack
PS Claim 4; Page 41-42; 53pp; French.
CC This is the amino acid sequence of a mature lipopolysaccharide (LPS)
CC binding protein from Bombyx mori. The protein was isolated from the
CC haemolymph of fifth stage B.mori larvae after injection with Enterobacter
CC cloacae strain 57-9. Partial amino acid sequence was used to generate
CC PCR primers (T10280-1). These amplified a fragment of the gene used as a
CC probe to obtain the full length gene (T10879) by screening a cDNA library
CC derived from B.mori previously injected with heat-killed E.coli. The
CC protein or fragments of it, can be used to treat diseases associated with
CC LPS complexes e.g. septic shock, to remove LPS from products used for
CC injection and to protect transgenic plants e.g. vines, tobacco, tomato or
CC potato, against fungal infections.

PT A polynucleotide encoding glycosaminoglycan sulphate group
PT transferase - useful for the recombinant production of the enzyme
PS Claim 5; Page 18-19; 22pp; Japanese.
CC The present sequence represents a specifically claimed human
CC glycosaminoglycan sulphate group transferase. The present invention
CC describes a DNA molecule coding at least part of a polypeptide of
CC glycosaminoglycan sulphate group transferase having the 356 amino acid
CC sequence as shown in W72571 to W72573, and optionally having a
CC replacement, deletion, or insertion of at least one amino acid (aa)
CC residue but still retaining the enzymic activity of transferring a
CC sulphate group from a sulphate group donor to the 2-OH of a L-iduronic
CC acid residue contained in a sulphate group receptor glycosaminoglycan.
CC The nucleic acid can be used for the recombinant production of the
CC enzyme, especially for the production of heparan sulphate 2-O-sulphate
CC group transferase (HS2ST).

 PT Microorganisms transformed with P. cepacia PRI-23 Tom enzyme gene -
 PT are useful for degradation of chloroaliphatic cpds. and aromatics
 PS Claim 1; Column 33-36; 25pp; English.
 CC The present sequence is that of toluene ortho-monoxygenase subunit
 CC tomA5 encoded by T44457, isolated from Pseudomonas cepacia strain
 CC PRI-23. The Tom gene is present on a large self-transmissible plasmid
 CC denoted pTOM. The enzyme is capable of degrading trichloroethylene
 CC (TCE), a hazardous pollutant. The pTOM plasmid is transmissible and
 CC expressable in other bacteria, thus many bacteria can be genetically
 CC altered to constitutively degrade TCE, esp. in bioreactors or
 CC TCE-contaminated environments. P. cepacia PRI-23 contg. pTOM does not
 CC need exogenous chemical inducers and is capable of functioning under a
 CC diverse set of conditions. Also it does not require an inducer that is a
 CC co-substrate for the enzyme required to break down TCE, in effect, it is
 CC not subject to competitive inhibition.

 PT A polynucleotide encoding glycosaminoglycan sulphate group
 PT transferase - useful for the recombinant production of the enzyme
 PS Claim 3; Page 15-16; 22pp; Japanese.
 CC The present sequence represents a specifically claimed glycosaminoglycan
 CC sulphate group transferase from Chinese hamster. The present invention
 CC describes a DNA molecule coding at least part of a polypeptide of
 CC glycosaminoglycan sulphate group transferase having the 356 amino acid
 CC sequence as shown in W72571 to W72573, and optionally having a
 CC replacement, deletion, or insertion of at least one amino acid (aa)
 CC residue but still retaining the enzymic activity of transferring a
 CC sulphate group from a sulphate group donor to the 2-OH of a L-iduronic
 CC acid residue contained in a sulphate group receptor glycosaminoglycan.
 CC The nucleic acid can be used for the recombinant production of the
 CC enzyme, especially for the production of heparan sulphate 2-O-sulphate
 CC group transferase (HS2ST).

PT Helicobacter pylori nucleic acid sequences and related
PT polypeptide(s) - useful for vaccines to treat or prevent H. pylori
PT infection, and to detect Helicobacter
PS Claim 72; Page 601; 1481pp; English.
CC The present sequence encodes a Helicobacter pylori secreted or
CC periplasmic protein.
CC The protein may be used in a vaccine to prevent or treat H. pylori
CC infection or to identify H. pylori polypeptide binding compounds,
CC useful as potential H. pylori life cycle activators or inhibitors.
CC The genomic sequence of H. pylori (ATCC 55679) was determined from
CC overlapping contigs generated by mechanically shearing the bacterial
CC DNA. The sequences were analysed for ORF of at least 180 nucleotides,
CC and the predicted coding regions defined by computer evaluation. To
CC identify likely H. pylori antigens for vaccine development, the amino
CC acid sequences predicted from various ORF were analysed for significant
CC homology to other known or exported membrane proteins. Having identified
CC and determined the sequences of interest, particular regions can be
CC isolated from H. pylori by PCR amplification for recombinant polypeptide
CC production, e.g. in E. coli hosts.

PT Auto-phosphorylating peptide with phosphatidyl:inositol
PT 3-kinase-like activity, designated p110delta - useful for
PT controlling cell motility, particularly of metastatic cancer cells
PS Disclosure; Fig 1A; 72pp; English.
CC The present sequence represents a novel autophosphorylating protein
CC that has PI3 (phosphatidylinositol 3-hydroxy) kinase activity, and
CC is designated p110-delta. The protein is expressed selectively in
CC white blood cells and melanomas. The protein is a lipid kinase with
CC broad phosphoinositide specificity and specific tissue localisation,
CC possibly involved in regulation of melanoma metastases (it is not
CC expressed in normal melanocytes). DNA fragments encoding the present
CC sequence are used to detect tissue-specific expression, and a
CC similar analysis can be done at the protein level using antibodies in
CC standard immunoassays. These assays are particularly used for diagnosing
CC and predicting motility/invasiveness of metastatic cancer cells. The
CC protein can be used in human or veterinary medicine for controlling
CC motility of cells, where the protein increases motility while antisense
CC sequences are used to reduce it.
CC note: this record is revised to include second DR line which gives the
CC nucleotide sequence.

PT      New phosphatidylinositol 3-kinase catalytic subunit - used to
PT      develop products for modulating kinase activity in immune system
PT      signalling and in carcinogenesis
PS      Claim 11: Page 33-37; 53pp; English.
CC      This is the deduced amino acid sequence of the catalytic p110
CC      delta subunit of human phosphatidylinositol 3-kinase (PI 3-kinase).
CC      The sequence was deduced from a composite cDNA clone (see V58570)
CC      derived from peripheral blood mononuclear cell and macrophage
CC      cDNA. The following are claimed: (1) a purified and isolated
CC      polynucleotide (PN) encoding p110 delta; (2) a vector comprising a
CC      DNA as in (1); (3) a host cell stably transformed or transfected
CC      with a DNA as in (1); (4) PN encoding a lipid kinase, and
CC      hybridising to PN having the 5220 bp sequence; (5) a purified and
CC      isolated p110 delta polypeptide as in (4); (6) an antibody
CC      specifically immunoreactive with p110 delta; (7) a hybridoma cell
CC      line (especially 208F (HB 12200) producing a monoclonal antibody as
CC      in (6); and (8) a humanised antibody as in (6). p110 delta has
CC      kinase activity and may play a role in PI 3-kinase mediated
CC      signalling in the immune system and in carcinogenesis. The
CC      products can be used to develop agents that modulating p110 delta
CC      kinase activity and to develop diagnostic reagents (claimed). They
CC      may also be used for detection and diagnosis of p110 delta in a
CC      biological sample.

RT null mutation in sspA on Escherichia coli protein synthesis and
RT survival during growth and prolonged starvation";
RL MOL. MICROBIOL. 11:1029-1043(1994).

CC -!- FUNCTION: FORMS AN EQUIMOLAR COMPLEX WITH THE RNA POLYMERASE
CC HOLOENZYME (RNAP) BUT NOT WITH THE CORE ENZYME, IT IS SYNTHESIZED
CC PREDOMINANTLY WHEN CELLS ARE EXPOSED TO AMINO ACID STARVATION, AT
CC WHICH TIME IT ACCOUNTS FOR OVER 50% OF THE TOTAL PROTEIN
CC SYNTHESIZED. IT IS INVOLVED IN THE TRANSITION FROM P1 EARLY TO P1
CC LATE GENE EXPRESSION. RNK AND SSPA CAN FUNCTIONALLY REPLACE
CC P.AERUGINOSA ALGINATE REGULATORY GENE ALGR2.
CC -!- INDUCTION: BY AMINO ACID STARVATION
CC -!- SIMILARITY: BELONGS TO THE GST SUPERFAMILY. HSP26 FAMILY. STRONG,
CC TO OTHER BACTERIAL SSPA.

CC -!- FUNCTION: REMOVES THE AMINO-TERMINAL METHIONINE FROM NASCENT
CC PROTEINS (BY SIMILARITY).
CC -!- CATALYTIC ACTIVITY: L-METHIONYLPEPTIDE + H(2)O = L-METHIONINE
CC + PEPTIDE.
CC -!- COFACTOR: COBALT (BY SIMILARITY).
CC -!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY M24C; ALSO KNOWN AS THE
CC MAP FAMILY 2.

Statistics: Mean 21.983; Variance 22.750; scale 0.966

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT DNA encoding cGMP-stimulated phosphodiesterase - for prodn. of
PT recombinant enzyme
PS Example 4; Column 65-72; 68pp; English.
CC This sequence represents the cyclic GMP stimulated phosphodiesterase
CC (CGS-PDE) clone p3CGS-5 isolated from bovine adrenal cortex. The cyclic
CC nucleotide phosphodiesterases (PDEs) catalyze the hydrolysis of 3', 5',
CC cyclic nucleotides, such as cAMP and cGMP, to their corresponding
CC 5'-nucleotide monophosphates. The PDEs are therefore important in the
CC control of the cellular concentration of cyclic nucleotides. The PDEs
CC are, in turn, regulated by transmembrane signals or second messenger
CC ligands such as calcium ion or cGMP. The PDEs therefore have a central
CC role in regulating the flow of information from extracellular hormones,
CC neurotransmitters, or other signals that use the cyclic nucleotides as
CC messengers. PDEs are present in most of the cells and tissues of
CC eukaryotic organisms, but only in trace amounts. CGS-PDEs are stimulated
CC by cGMP in effecting cAMP hydrolysis. This is thought to occur through a
CC noncatalytic cGMP-specific site present on the CGS-PDE. The cDNA
CC encoding this sequence can be used for the production of recombinant
CC CGS-PDE, which may have therapeutic and diagnostic uses. This protein
CC may also be useful for diagnostic antibody production.
SQ Sequence 921 AA;

```

CC nucleotide phosphodiesterase (Cam PDE) clone p3CGS-5. Eukaryotic cells
CC that express Cam PDE can be used to screen cpds. for the ability to
CC modulate Cam PDE activity. Cam PDEs are involved in regulating
CC the transmission of information from hormones, neurotransmitters
CC or other systems that use cyclic nucleotides as messengers.
CC Antibodies raised against Cam PDE can be used for enzyme purifcn.,
CC or determination.

PT DNA encoding bovine and human phosphodiesterase enzymes - stimulated
PT by calcium/calmodulin, useful for recombinant prodn. of the enzymes
PS Example 4; Column 73-78; 69pp; English.
CC The present sequence represents the amino acid sequence from the large
CC open reading frame of p3CGS-5 cDNA bovine adrenal cortex clone insert.
CC The presence of 36 adenosine residues at the 3'-end of the cDNA preceded
CC by a transcription termination consensus sequence suggests that all of
CC the 3' untranslated sequence of the cyclic-GMP-stimulated
CC phosphodiesterase (cGS-PDE) mRNA is represented by this clone. The DNA
CC sequences of the cGS-PDE's are used for the production of the
CC recombinant enzymes, which in turn may be used for antibody production
CC and to screen for compounds that modulate phosphodiesterase activity.

PT New calmodulin and calcium stimulated cyclic nucleotide
phosphodiesterase - used e.g to identify selective modulators,
potentially useful as e.g. cardiotonic, antidepressant,
antihypertensive agents
PS Example 4; Columns 71-76; 69pp; English.
CC The present sequence represents a cyclic-GMP-nucleotide phosphodiesterase
(CGS-PDE) polypeptide isolated from bovine adrenal cortex.
CC The specification describes calcium ion/calmodulin stimulated cyclic
nucleotide phosphodiesterases (CAM-PDEs). CAM-PDEs are characterised
by their responsiveness to intracellular calcium, which leads to a
decreased intracellular concentration of cAMP and/or cGMP. CAM-PDEs,
and their fragments or synthetic peptides, are used in therapy,
prognosis and diagnosis. They are also used to generate specific
antibodies useful as immunoassay reagents for detecting the
protein or for affinity purification and for identifying specific
modulators of CAM-PDE activity. CAM-PDEs are implicated in signalling
involving extracellular hormones and neurotransmitters, so selective
inhibitors are potentially useful as cardiotonic, antidepressant,
antihypertensive and antithrombotic agents.

PT Identification of modulators of Calcium/calmodulin sensitive cyclic
nucleotide phosphodiesterase - uses recombinant cells expressing the
enzyme and monitoring protein expression in the presence of
potential modulators
PS Example 4; Columns 73-78; 69pp; English.
CC The present sequence is encoded by a sequence isolated from a bovine
adrenal cortex cDNA library known as cyclic guanosine monophosphate
stimulated phosphodiesterase (CGS-PDE). The specification also describes
Ca2+/calmodulin sensitive cyclic nucleotide phosphodiesterase (CAM-PDE)
enzymes. CAM-PDE enzymes catalyse the hydrolysis of cyclic nucleotides
and as such control their intracellular level. They are controlled by
second messengers e.g. Ca2+ and calmodulin and transmembrane signals and
through pathways involving these, regulate flow of information from
extracellular hormones, neurotransmitters and other signals using cyclic

CC nucleotides as messengers. The specification describes an assay for
CC identifying a chemical agent which modifies the enzymatic activity of a
CC mammalian CAM-PDE. The assays are useful for identifying modulators of
CC CAM-PDEs. The assay is carried out by incubating cells expressing
CC CAM-PDE with the suspected modulator and measuring its effect
CC e.g. monitoring the hydrolysis of cAMP and/or cGMP.

PT DNA encoding cGMP-stimulated phospho-di:esterase - for prodn. of
PT recombinant enzyme
PS Example 6; Column 89-96; 68pp; English.
CC This sequence represents the cyclic GMP stimulated phosphodiesterase
CC (cGS-PDE) clone pHCs6n isolated from human foetal brain. The cyclic
CC nucleotide phosphodiesterases (PDEs) catalyse the hydrolysis of 3', 5'
CC cyclic nucleotides, such as cAMP and cGMP, to their corresponding
CC 5'-nucleotide monophosphates. The PDEs are therefore important in the
CC control of the cellular concentration of cyclic nucleotides. The PDEs
CC are, in turn, regulated by transmembrane signals or second messenger
CC ligands such as calcium ion or cGMP. The PDEs therefore have a central
CC role in regulating the flow of information from extracellular hormones,
CC neurotransmitters, or other signals that use the cyclic nucleotides as
CC messengers. PDEs are present in most of the cells and tissues of
CC eukaryotic organisms, but only in trace amounts. cGS-PDEs are stimulated
CC by cGMP in effecting cAMP hydrolysis. This is thought to occur through a
CC noncatalytic cGMP-specific site present on the cGS-PDE. The cDNA
CC encoding this sequence can be used for the production of recombinant
CC cGS-PDE, which may have therapeutic and diagnostic uses. This protein
CC may also be useful for diagnostic antibody production.

COMMENT	This protein acts as both cell adhesion ligand and peroxidase, and it belongs to a family of proteins that includes myeloperoxidase. It also triggers an intracellular signaling pathway involving protein kinase C activation and protein tyrosine phosphorylation, leading to cell spreading and degranulation, stimulates cellular reactions.
CLASSIFICATION	superfamily peroxinectin; myeloperoxidase homology

apparatus and interphase cytoplasm.";
RL J. CELL BIOL. 113:817-833(1991).
CC -1- FUNCTION: KINESIN IS A MICROTUBULE-ASSOCIATED FORCE-PRODUCING
PROTEIN THAT MAY PLAY A ROLE IN ORGANELLE TRANSPORT.
```

```
CC -1- SUBUNIT: OLIGOMER COMPOSED OF TWO HEAVY CHAINS AND TWO LIGHT
CC CHAINS.
CC -1- DOMAIN: COMPOSED OF THREE STRUCTURAL DOMAINS: A LARGE GLOBULAR N-
CC TERMINAL DOMAIN WHICH IS RESPONSIBLE FOR THE MOTOR ACTIVITY OF
CC KINESIN (IT HYDROLYZES ATP AND BINDS MICROTUBULE), A CENTRAL
CC ALPHA-HELICAL COILED COIL DOMAIN THAT MEDIATES THE HEAVY CHAIN
CC DIMERIZATION; AND A SMALL GLOBULAR C-TERMINAL DOMAIN WHICH
CC INTERACTS WITH OTHER PROTEINS (SUCH AS THE KINESIN LIGHT CHAINS),
CC VESICLES AND MEMBRANOUS ORGANELLES.
CC -1- SIMILARITY: BELONGS TO THE KINESIN-LIKE PROTEIN FAMILY. KINESIN
CC SUBFAMILY.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT Tomato Mi resistance gene - for producing nematode-resistant
transgenic plants
PS Claim 39; Fig 5A-D; 48pp; English.
CC This polypeptide is encoded by the tomato Mi resistance gene (see
V13935) that confers resistance against nematodes. The invention
relates to genes, such as the Mi resistance gene, capable of
confering nematode resistance, and to genetically transformed
plants which are resistant to nematodes, especially Meloidogyne
incognita. In addition to expression in plants, the Mi resistance
gene product can be expressed in bacterial or yeast cells.
CC Antibodies raised against the polypeptide can be used to detect the
presence of the Mi resistance gene product.

PT New plant-derived dirigent proteins and pinoresinol-lariciresinol reductases - and related nucleic acid, vectors and transformants, used for stereospecific production of lignans, useful e.g. as anticancer or antiviral agents
PS Claim 17; Page 122-123; 148pp; English.
CC PLR-Tp1 comprises a (-)-pinoresinol/(-)-lariciresinol reductase (P/LR) of Thuja plicata. P/LR enzymes catalyze the conversion of pinoresinol to lariciresinol and then to secoisolariciresinol. 4 Isoforms (see W65044-47) of T. plicata P/LR have been identified; the other 3 isoforms are (+)/(-)-P/LR. Further P/LR enzymes have been obtained from Forsythia intermedia (see W65038-43) and Tsuga heterophylla (see W65048-49). The isolation of cDNAs encoding P/LR (see V35175-80 and V35182-87) and dirigent proteins (see V35160-71) permits the development of an efficient expression system for those enzymes, provides useful tools for examining the developmental regulation of lignan biosynthesis and permits the isolation of related sequences. It also allows the transformation of a wide range of organisms, including plants, in order to modify lignan biosynthesis. Optically pure lignans may have e.g. anticancer, antiviral, antioxidant, antibiotic or antifeedant activity.

 PT Mouse phospho:tri:esterase-related protein DNA - used to develop
 PT prods. for diagnosis of poly:cystic kidney disease or acute renal
 PT failure
 PS Claim 1: Column 25-28; 23pp; English.
 CC This sequence represents the mouse phosphotriesterase related protein
 CC (MPRP). The MPRP sequence has abnormal underexpression in the recessive
 CC cpk murine model of a polycystic kidney disease (PKD), and has decreased
 CC expression following acute renal injury. PKD is a common disease
 CC (affecting 1 in 500-1000 individuals) and can be inherited as an
 CC autosomal dominant or as an autosomal recessive. PKD is characterised
 CC by the development of innumerable, large, fluid-filled cysts from the
 CC nephrons and collecting ducts of affected kidneys. It is thought that
 CC enlargement of the cysts interferes with functioning of the normal renal
 CC parenchyma, which eventually leads to renal failure. The MPRP, or other
 CC similar mammalian PRPs can be used as diagnostic markers for PKD and
 CC acute renal failure. The PRPs can also be used in therapeutic and
 CC protective treatments, such as for acute organophosphate toxicity. They
 CC can also be used to develop products to enhance the effectiveness of
 CC other types of therapy, e.g. phosphotriesterase inhibitors to enhance the
 CC effectiveness of certain anti-cancer, or anti-HIV drugs.

 PT Live recombinant vaccine based on feline herpes virus - has
 PT antigen-encoding sequence inserted in open reading frame 2 or 5,
 PT particularly for protection against feline infectious peritonitis
 PT virus
 PS Claim 18: Fig 1; 60pp; French.
 CC This sequence represent the protein encoded by ORF5 from the feline
 CC herpes virus type 1 (FHV-1) from strain CO. The nucleotide sequence
 CC is used as a vector to generate a live recombinant vaccine, in which a
 CC polypeptide coding sequence (especially a gene taken from the feline
 CC infectious peritonitis virus (FIPV)) is inserted into open reading
 CC frames 5 and/or 2. Vaccines comprising the vector are used to protect
 CC cats, specifically against FIPV. The vaccine is attenuated but retains
 CC a good capacity to replicate in vivo and still protects against
 CC infectious rhinotracheitis (caused by FHV).

PT New polynucleotides encoding secreted human proteins - derived from
 PT human foetal brain, adult brain, foetal kidney, adult ovary, adult
 PT retina, adult placenta or adult uterus cDNA libraries
 PS Claim 25: Page 89; 127pp; English.
 CC This sequence represents a human secreted protein of the invention.
 CC The DNA encoding this sequence was isolated from a human adult brain
 CC cDNA library, and was designated clone bv227_1. The DNAs and proteins
 CC are predicted to have biological activities which would make them
 CC suitable for treating, preventing or ameliorating medical conditions in
 CC humans and animals, although no supporting data is given. Suggested
 CC activities include nutritional sources or supplements, immune
 CC stimulating or suppressing activity, haematopoiesis regulating activity,
 CC tissue growth activity, activin/inhibin activity,
 CC chemotactic/chemokinetic activity, haemostatic and thrombolytic activity,
 CC receptor/ligand activity, anti-inflammatory activity, cadherin/tumour
 CC invasion suppressor activity, and tumour inhibition activity. The DNAs
 CC are also stated to be useful for gene therapy. A host cell transfected
 CC with the DNA, or its subfragments and variants is useful for recombinant
 CC production of the human secreted protein clones.

 PT Helicobacter pylori nucleic acid sequences and related
 PT polypeptide(s) - useful for vaccines to treat or prevent H. pylori
 PT infection, and to detect Helicobacter
 PS Claim 72; Pages 1038-1039; 1481pp; English.
 CC The present sequence is a Helicobacter pylori secreted or
 CC periplasmic protein.
 CC The protein may be used in a vaccine to prevent or treat
 CC H. pylori infection or to identify H. pylori polypeptide binding
 CC compounds, useful as potential H. pylori life cycle activators or
 CC inhibitors, the genomic sequence of H. pylori (ATCC 55679) was
 CC determined from overlapping contigs generated by mechanically
 CC shearing the bacterial DNA. The sequences were analysed for ORF of
 CC at least 180 nucleotides, and the predicted coding regions defined
 CC by computer evaluation. To identify likely H. pylori antigens for
 CC vaccine development, the amino acid sequences predicted from
 CC various ORF were analysed for significant homology to other known
 CC or exported membrane proteins. Having identified and determined
 CC the sequences of interest, particular regions can be isolated from
 CC H. pylori by PCR amplification for recombinant polypeptide
 CC production, e.g. in E. coli hosts.

 PT Helicobacter pylori nucleic acid sequences and related
 PT polypeptide(s) - useful for vaccines to treat or prevent H. pylori
 PT infection, and to detect Helicobacter
 PS Claim 72; Pages 610; 1481pp; English.
 CC The present sequence is a Helicobacter pylori secreted or periplasmic
 CC protein. The protein may be used in a vaccine to prevent or treat
 CC H. pylori infection or to identify H. pylori polypeptide binding
 CC compounds, useful as potential H. pylori life cycle activators or
 CC inhibitors. The genomic sequence of H. pylori (ATCC 55679) was
 CC determined from overlapping contigs generated by mechanically shearing
 CC the bacterial DNA. The sequences were analysed for ORF of at least 180
 CC nucleotides, and the predicted coding regions defined by computer
 CC evaluation. To identify likely H. pylori antigens for vaccine
 CC development, the amino acid sequences predicted from various ORF were
 CC analysed for significant homology to other known or exported membrane

CC proteins. Having identified and determined the sequences of interest,
 CC particular regions can be isolated from H. pylori by PCR amplification
 CC for recombinant polypeptide production, e.g. in E. coli hosts.

 PT New DNA sequences encoding enzymes involved in biotin biosynthesis -
 PT isolated from Bacillus sphaericus, and transformants useful in
 PT fermentative biotin production.
 PS Disclosure; p; French.
 CC DNA was isolated from B.sphaericus IFO 3525, cut with HindIII and
 CC the fragments sub-cloned into pBR322. The recombinant plasmids were
 CC used to transform E.coli bio- mutants. Plasmid pTG1400 was present
 CC in one clone (E.coli C600; CNCM I-608) which showed complementation
 CC for bio A and bio D. The plasmid contains a 4.3kb insert which
 CC contains 4 long open reading frames (LORFs) including that which
 CC encodes bio B. This enzyme is well characterised.
 CC A second clone was isolated which contained DNA encoding bio F and
 CC bio C. The insert present in the plasmid of this clone and the 4.3kb
 CC insert from pTG1400 were cloned together in pBR322 to produce a
 CC plasmid (pTG1440) which complements biotin auxotrophy in a bio delta
 CC FCD mutant.
 CC Transformed cells are used to produce biotin by culture in a medium
 CC contg pimelic acid and/or biotin vitamer. Co-culture of two
 CC transformants is preferred where one synthesises the vitamer from
 CC pimelic acid and the other converts the vitamer to biotin.
 CC See also N81551.

 PT Use of laminin and fragments - for developing products for use in
 PT the diagnosis and treatment of amyloid disease, e.g. Alzheimer's
 PT disease or CJD
 PS Claim 15; Page 102-105; 132pp; English.
 CC This is the amino acid sequence of the mouse laminin G1 chain. The
 CC primary object of the invention is to use laminin, laminin-derived
 CC protein fragments and/or laminin-derived polypeptides as potent
 CC inhibitors of amyloid formation, deposition, accumulation and/or
 CC persistence in Alzheimer's disease and other amyloidosis. The
 CC laminin products (see W50888-98) may include mouse or human laminin
 CC A or A1 chain, laminin B1 or B2 chain, laminin A2 chain (merosin),
 CC laminin G1 chain, the globular repeats of the laminin A1 chain and
 CC the beta-amyloid binding domain of the laminin A chain. A claimed
 CC method for treating an amyloid disease comprises administering a
 CC polypeptide having a conformational similarity to a fragment of a
 CC laminin protein. A method for diagnosing an amyloid disease
 CC involves determining levels of laminin in a sample. Production
 CC of laminin or its fourth globular repeat in vivo provides a method
 CC for in vivo inhibition of beta-amyloid amyloidosis. The products
 CC and methods can be used for the diagnosis, prognosis, monitoring
 CC and treatment of amyloidosis such as Alzheimer's disease, Down's
 CC syndrome and hereditary cerebral haemorrhage with amyloidosis of
 CC the Dutch type (where the specific amyloid is the beta-amyloid
 CC protein), the amyloidosis associated with chronic inflammation,
 CC various forms of malignancy and Familial Mediterranean Fever (AA
 CC amyloid or inflammation-association amyloidosis), the amyloidosis
 CC associated with multiple myeloma and other B-cell abnormalities
 CC (AL amyloid), the amyloidosis associated with type II diabetes
 CC (amylin or islet amyloid), the amyloidosis associated with prion
 CC diseases including Creutzfeldt-Jacob disease, Gerstmann-Straussler
 CC syndrome, kuru and animal scrapie (PrP amyloid), the amyloidosis
 CC associated with long-term haemodialysis and carpal tunnel syndrome
 CC (beta 2-microglobulin amyloid), the amyloidosis associated with
 CC senile cardiac amyloid and Familial Amyloidotic Polynuropathy
 CC (prealbumin or transthyretin amyloid), and the amyloidosis
 CC associated with endocrine tumours such as medullary carcinoma of
 CC the thyroid (variant of procalcitonin).

PT Novel polypeptide(s) from Staphylococcus aureus strain WCUH29 - used
PT to isolate antimicrobial compounds, and in vaccines against S.
PT aureus infection
PS Claim 6; Page 391; 989pp; English.
CC The present sequence represents a Staphylococcus aureus protein, that,
CC based on homology with a Bacillus subtilis protein, is believed
CC to be an elongation factor Tu. The DNA sequence was isolated from a
CC library of clones of S. aureus WCUH 29 in Escherichia coli. The DNA
CC sequence can be used in the construction of ribozymes and antisense
CC sequences to control the expression of Staphylococcal genes. The DNA
CC sequence is also useful as a source of regulatory elements for the
CC control of bacterial gene expression. The present protein may be used
CC to produce vaccines to enable a host to produce specific antibodies
CC with antibacterial action. These vaccines and antibodies would protect
CC a host against invasion by S. aureus, and conditions relating to
CC Staphylococcal infection, e.g. Staphylococcal food poisoning, scaled
CC skin syndrome, and toxic shock syndrome.

PT New nucleic acid sequences from Staphylococcus aureus WCUH29 -
PT useful in vaccines and for treatment of bacterial infections of e.g.
PT respiratory tract and central nervous system
PS Claim 11; Page 269-270; 390pp; English.
CC This sequence represents a Staphylococcus aureus protein, that based on
CC homology with a Bacillus subtilis protein, is an elongation factor Tu
CC (Ef-Tu), and is encoded by a DNA sequence of the invention.
CC The DNA sequences were isolated from Staphylococcus aureus WCUH29
CC (NCIMB 40771). Host cells containing the DNA sequences are used to
CC produce polypeptides or fragments. The proteins are used in the treatment
CC of disease, for inducing an immune response by administering them, to
CC produce antibody and/or T-cell immune response. Antagonists of the
CC proteins are used for the inhibition of bacterial polypeptides.
CC Conditions which may be treated include bacterial infections, especially
CC respiratory, cardiac, gastrointestinal, central nervous, eye, kidney,
CC urinary tract, skin, bones and joints. The proteins can also be used to
CC identify antimicrobial compounds which are broad spectrum antibiotics,

CC especially useful in the treatment of H. pylori infection.

COMMENT This ATPase transports protons across the plasma membrane to
regulate intracellular pH and ion balance and to generate the
electrochemical gradient that drives nutrient uptake.
COMMENT Topological study of this protein shows certain regions to be
accessible to proteinases on the cytoplasmic face (reference
A37880) and 5 of 8 Cys residues to be accessible to
water-sulphydryl reagents (reference A3846).

RT "High-resolution solution structure of the double Cys2His2 zinc
RL finger from the human enhancer binding protein MBP-1";
CC BIOCHEMISTRY 31:3907-3917(1992).
CC -1- FUNCTION: THIS PROTEIN SPECIFICALLY BINDS TO THE DNA SEQUENCE
CC 5'-GGGACTTCC-3' WHICH IS FOUND IN THE ENHANCER ELEMENTS OF
CC NUMEROUS VIRAL PROMOTERS SUCH AS THOSE OF SV40, CMV, OR HIV1.
CC IN ADDITION, RELATED SEQUENCES ARE FOUND IN THE ENHANCER ELEMENTS
CC OF A NUMBER OF CELLULAR PROMOTERS, INCLUDING THOSE OF THE CLASS I
CC MHC, INTERLEUKIN-2 RECEPTOR, AND INTERFERON-BETA GENES. IT MAY ACT
CC IN T-CELL ACTIVATION.
CC -1- SUBCELLULAR LOCATION: NUCLEAR.
CC -1- INDUCTION: BY MITOGEN AND PHORBOL ESTER.
CC -1- DOMAIN: CONTAINS TWO SETS OF 2 ZINC-FINGERS, WHICH ARE WIDELY
CC SEPARATED AND RECOGNIZE THE SAME DNA SEQUENCE. THERE IS A FIFTH
CC ZINC-FINGER IN-BETWEEN.
CC -1- SIMILARITY: 70% BETWEEN THE TWO ZINC-FINGER DOMAINS.
CC -1- SIMILARITY: STRONG, TO HIVP2.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Statistics: Mean 14.860; Variance 44.445; scale 0.334

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT Use of the human ST toxin receptor protein - for developing products
PT for treating individuals suffering from or susceptible to metastatic
PT colon cancer
PS Claim 1; Page 25-28; 35pp; English.
CC This protein comprises human ST receptor, a receptor found on
CC colorectal cells, including local and metastasized colorectal
CC cancer cells. A claimed vaccine composition includes a protein
CC comprising at least one epitope of human ST receptor, especially
CC an epitope of the extracellular domain of the ST receptor, or a
CC nucleic acid molecule that encodes the protein. The vaccines can
CC be used for treating individuals suffering from, or susceptible
CC to, metastatic colorectal cancer. Susceptible individuals may
CC include: those suffering from inflammatory bowel disease,
CC particularly those with ulcerative colitis; those with colonic
CC polyps; those with familial adenomatous polyposis, a heritable
CC mutation predisposing patients to develop large numbers of
CC intestinal polyps; those with Peutz-Jeghers syndrome; those with
CC hereditary nonpolyposis coli, a heritable mutation which

CC predisposes people to develop colon carcinoma; and those with
CC Turcot syndrome-colon carcinoma in conjunction with independent
CC tumours of the central nervous system. The vaccines may comprise
CC DNA vaccines, infectious vector-mediated vaccines, killed or
CC inactivated vaccines, subunit vaccines and haptenised subunit
CC vaccines. 1073 AA;

DR Determining whether an individual has metastasised colorectal cancer
PT cells and origin of tumour cells - by detecting presence of
PT heat-stable toxin receptor on cells in a sample
PS Example 1: Page 46-49; 62pp; English.
CC This protein comprises human heat-stable toxin (ST) receptor
CC protein, a highly specific marker for metastatic colorectal cancer.
CC New in vitro methods for determining whether or not (i) an
CC individual has metastasised colorectal cancer cells, or (ii) a
CC tumour cell is a colorectal cancer cell, comprise the steps of
CC examining a sample of extraintestinal tissue and/or body fluids or
CC tumour cell from an individual to determine whether ST receptor
CC protein is being expressed by cells in the sample, where expression
CC of ST receptor is determined by: (a) detecting the presence of
CC protein in the sample that binds to antibodies that specifically
CC bind to amino acids 24-430 or 1031-1093 of human ST receptor; or
CC (b) detecting the presence of mRNA in the sample that encodes amino
CC acids 24-430 or 1031-1093 of human ST receptor. Expression may be
CC determined by PCR, where the sample is contacted with primers (see
CC T99462-T99531) that selectively hybridise to sequences that encode
CC amino acids 24-430 of the receptor and which selectively amplify
CC mRNA or cDNA that encodes ST receptor protein (see also T97229).

DR New purified enterotoxin receptor protein - used to develop
PT prods. for treating abnormal conditions caused by bacterially
PT released enterotoxin, partic. diarrhoea
PS Claim 2: Fig 1: 26pp; English.
CC This sequence represents guanylyl cyclase, GC-C, which binds heat
CC stable enterotoxin. The DNA encoding this protein was isolated from
CC rat small intestinal mucosa polyA+ RNA by PCR. This protein is an
CC enterotoxin receptor which may be used as a therapeutic to control
CC intestinal fluid permeation as well as abnormal conditions caused
CC by bacterially released enterotoxin. The binding domain of the
CC protein, or antibodies to the protein, can be used to eliminate
CC diarrhoea. The protein may be used to isolate ligands and to screen
CC for antagonists of toxin binding.

 PT DNA encoding human calcium channel alpha 1B sub-unit protein -
 PT useful for recombinant production of the channel for screening of
 PT its modulators, and diagnosis of Lambert Eaton Syndrome
 PS Disclosure; Columns 271-284; 166pp; English.
 CC The present sequence represents the alpha-1D subunit of a human calcium
 CC channel. Calcium channels are membrane-spanning, multi-subunit proteins
 CC that allow controlled entry of calcium ions into cells. This leads
 CC to depolarisation events required for muscle contraction. The recombinant
 CC subunit, when expressed with nucleic acids encoding the complete calcium
 CC channel, can be used in assays for the detection and characterisation of
 CC compounds that modulate the channel. The DNA encoding the subunits can
 CC be alternatively spliced when transcribed, giving more than one form of
 CC the protein from the same transcript, each having slightly different
 CC properties. In addition, the reactivity of the alpha 1 subunit with IgG
 CC molecules from the serum of an individual with Lambert Eaton Syndrome
 CC (LES) can be used as a diagnostic for the disease.

 PS Disclosure; Page 126-127; 285pp; English.
 CC The alpha 1D subunit cDNA has been isolated using fragments of the
 CC rabbit skeletal muscle calcium channel alpha 1 subunit cDNA as a
 CC probe to screen a cDNA library of human neuroblastoma cell line
 CC IMR32, to obtain clone alpha1.36. This clone was used as a probe to
 CC screen additional IMR32 cell cDNA libraries to obtain overlapping
 CC clones, which were then employed for screening until a sufficient
 CC series of clones to span the length of the nt sequence encoding the
 CC human alpha 1D subunit was obt'd. Full-length clones were then
 CC constructed by ligating partial clones. Q84653 shows the nt sequence
 CC of the cDNA encoding the alpha 1D subunit. The Alpha 1D protein has
 CC a calculated Mr of 245,163. It contains four putative internal
 CC repeated sequence regions which represent 24 putative transmembrane
 CC segments. It mediates DHP-sensitive high-voltage, long-lasting
 CC calcium channel activity. Q84654 shows an alternative exon encoding
 CC the IS6 transmembrane domain. The difference occurs in AAs 373-
 CC 406.

PT DNA encoding human calcium channel alpha 1B subunit protein -
PT useful for recombinant production of the channel for screening of
PT its modulators, and diagnosis of Lambert Eaton Syndrome
PS Example 1; Columns 261-272; 166pp; English.
CC The present sequence represents the alpha-1D subunit of a human calcium
CC channel. Calcium channels are membrane-spanning, multi-subunit proteins
CC that allow controlled entry of calcium ions into cells. This leads
CC to depolarisation events required for muscle contraction. The recombinant
CC subunit, when expressed with nucleic acids encoding the complete calcium
CC channel, can be used in assays for the detection and characterisation of
CC compounds that modulate the channel. The DNA encoding the subunits can
CC be alternatively spliced when transcribed, giving more than one form of
CC the protein from the same transcript, each having slightly different
CC properties. In addition, the reactivity of the alpha 1 subunit with IgG
CC molecules from the serum of an individual with Lambert Eaton Syndrome
CC (LES) can be used as a diagnostic for the disease.

PT Mouse and human metastasis-associated p150-derived antigens - useful
PT for raising antibodies for therapy and diagnosis of tumours
PS Claim 3; Page 86-91; 11pp; English.
CC This protein comprises a novel human 150 kDa cell surface
CC metastasis-associated antigen, designated p150. It is the
CC homologue of a novel murine p150 metastasis-associated antigen (see
CC W31866). Its amino acid sequence was deduced from an isolated cDNA
CC clone (see T93627). A claimed method for determining the
CC metastatic potential of a tumour cell comprises assessing the level
CC of p150 expression in the cell, a higher level of p150 expression
CC being indicative of a lower state of differentiation and
CC consequently a higher metastatic potential. Immunogenic
CC determinants of p150 and antibodies raised against them are
CC useful in the diagnosis and treatment of metastatic potential in
CC tumours.

PT New bacterial amylase, A-180 for malto:pentose prodn. - by
PT hydrolysis of starch, providing high yield and modifiable for
PT secretion from host cells
PS Disclosure: Page 7; 21pp; German.
CC The amino acid sequence is that of bacterial amylase A-180 which is
CC used to prepare maltopentose (G5) in high yields by hydrolysis of
CC starch. It can be modified to ensure its excretion, obviating the need
CC to concentrate and purify the enzyme, i.e. the culture supernatant can
CC be used directly for G5 prodn. G5 yields of over 90% are possible,
CC eliminating the need for further G5 purification. G5 is used in medical
CC assays for diagnosis, as carbohydrate sources in liquid feeding compans.
CC and for converting (by esterification) fatty acids to water-soluble
CC form, suitable for use in stable infusion solns.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Thu Jul 8 18:31:11 1999; MasPar time 3.45 Seconds

Tabular output not generated. 81.918 Million cell updates/sec

Title: >US-09-041-236-2
Description: (213-222) from US09041236.pap (13 of 45)

Perfect Score: 66
Sequence: 1 REDNPKNPE 10

Scoring table: PAM 150
Gap 11

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0%
Listing first 45 summaries

Database: swiss-prot37
1:swissprot

Statistics: Mean 21.782; Variance 24.532; scale 0.888

pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

CC -!- FUNCTION: PRODUCES ATP FROM ADP IN THE PRESENCE OF A PROTON
CC GRADIENT ACROSS THE MEMBRANE. THE GAMMA CHAIN IS BELIEVED TO BE
CC IMPORTANT IN REGULATING ATPASE ACTIVITY AND THE FLOW OF PROTONS
CC THROUGH THE CF(0) COMPLEX.
CC -!- ENZYME REGULATION: THIOL-MODULATION BY RAISING THE ENZYME'S
CC ACTIVATION THRESHOLD UPON OXIDATION OF THE CYSTEINES, THEREBY
CC PREVENTING WASTEFUL ATP-HYDROLYSIS.
CC -!- SUBUNIT: F-TYPE ATPASES HAVE 2 COMPONENTS, CF(1) - THE CATALYTIC
CC CORE - AND CF(0) - THE MEMBRANE PROTON CHANNEL. CF(1) HAS FIVE
CC SUBUNITS: ALPHA(3), BETA(3), GAMMA(1), DELTA(1), EPSILON(1). CF(0)
CC HAS THREE MAIN SUBUNITS: A, B AND C.
CC -!- SIMILARITY: BELONGS TO THE ATPASE GAMMA CHAIN FAMILY.

Statistics: Mean 15.753; Variance 39.699; scale 0.397

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

DR Human LIM proteins - useful for treating and diagnosing cancer and
PT other proliferative diseases
PS Claim 18; Page 53-54; 94pp; English.
CC The sequence is that of the human LIM protein HLIM-2.
CC The protein, optionally expressed from gene therapy vectors,
CC can be used to treat or prevent cancer or arteriosclerosis or other
CC conditions involving abnormal regulation of cell growth.
CC Also antagonists of it, antisense molecules, ribozymes or
CC triplex-forming agents can be used to induce proliferation and
CC regeneration of cells, tissues and organs (e.g. nerves, pancreas
CC or epithelium), particularly in cases of accidental injury, or
CC degeneration, especially in context of skin grafts. Probes based
CC on the gene sequence are used to detect HLIM-encoding sequences by
CC hybridisation, optionally after amplification, for diagnosis or
CC monitoring of disease, or for assessing predisposition to disease.
CC They may also be used to map the corresponding genomic sequence.
CC Similar diagnostic assays are done at the protein level using
CC antibodies as immunoassay reagents. Antibodies raised against
CC HLIM can also be used therapeutically; for targeting other active
CC agents to cells that express HLIM; in drug screening and to isolate
CC natural HLIM.

 PT Helicobacter pylori nucleic acid sequences and related
 PT polypeptides) - useful for vaccines to treat or prevent H. pylori
 PT infection, and to detect Helicobacter
 PS Claim 61; Page 694-695; 1481pp; English.
 CC This sequence is a H. pylori chaperone protein.
 CC The protein may be used in a vaccine to prevent or treat H. pylori
 CC infection or to identify H. pylori polypeptide binding compounds,
 CC useful as potential H. pylori life cycle activators or inhibitors.
 CC The genomic sequence of H. pylori (ATCC 55679) was determined from
 CC overlapping contigs generated by mechanically shearing the bacterial
 CC DNA. The sequences were analysed for ORF of at least 180 nucleotides,
 CC and the predicted coding regions defined by computer evaluation. To
 CC identify likely H. pylori antigens for vaccine development, the amino
 CC acid sequences predicted from various ORF were analysed for significant
 CC homology to other known or exported membrane proteins. Having identified
 CC and determined the sequences of interest, particular regions can be
 CC isolated from H. pylori by PCR amplification for recombinant polypeptide
 CC production, e.g. in E. coli hosts.

 PT New nucleic acid encoding differentiation enhancing factor - used
 PT particularly to regulate adipogenesis and neurogenesis, e.g. for
 PT treating tumours and neurological disease
 PS Claim 3; Fig 12; 203pp; English.
 CC The differentiation enhancing factors (DEF), comprise at least one each
 CC of SH3 consensus binding sequence, ankyrin repeat, pleckstrin homology
 CC domain and C2 domain. The DEF induce adipogenesis or neurogenesis; they
 CC are mediators of SH3-domain dependent signalling and may be involved in
 CC cellular gene expression, cytoskeletal architecture, protein trafficking,
 CC endocytosis or adhesion, migration, proliferation and differentiation of
 CC cells. Typical applications of DEF and its ligand, or of nucleic acid
 CC interaction between the protein and its ligand, or of nucleic acid
 CC expressing them, are treatment of hyperplastic and neoplastic disease
 CC (a wide range of solid tumours and leukaemias), including metastases; for
 CC in vitro induction of differentiation of neural crest cells to neurons,
 CC glial cells etc.; for increasing neuron survival, and inducing cell
 CC repair, in the nervous system (e.g. treatment of traumatic injury,
 CC stroke, Alzheimer's, Parkinson's or Huntington's diseases, amyotrophic
 CC lateral sclerosis, multiple sclerosis etc.).

PT Squirrel derived protease inhibitor has similar structure to alpha-1
PT antitrypsin - shows selective inhibitory activity against
PT protease(s)
PS Claim 4; Page 8-9; 10pp; Japanese.
CC The present sequence represents a recombinant squirrel protease
CC inhibitor protein 55RS that contains a specifically claimed reaction
CC site, see features table. The protease inhibitor 55RS has inhibitory
CC activity against trypsin, elastase or thrombin. The protease inhibitor
CC has a new structure similar to alpha-1-antitrypsin and shows selective
CC inhibitory activity against proteases. The protease inhibitor cDNA was
CC homologous to cDNA encoding a similar squirrel protein designated
CC hibernation-related protein (HP-55).

Statistics: Mean 22.013; Variance 23.788; scale 0.925

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Title: >US-09-041-236-2
Description: (222-230) from US09041236.pep (14 of 45)
Perfect Score: 58
Sequence: 1 EAPLNVSrv 9

Scoring table: PAM 150
Gap 11

Searched: 77977 seqs, 28269293 residues
Post-processing: Minimum Match 0%
Listing first 45 summaries

Database: swiss-prot37
1:swissprot

Statistics: Mean 22.600; Variance 21.385; scale 1.057

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC -!- FUNCTION: THIS PROTEIN IS FOUND IN THE RIBONUCLEOPROTEIN CORE AND
CC IS INVOLVED IN THE EARLY ASSEMBLY OF THE 50S SUBUNIT. IT IS NOT
CC INVOLVED IN THE FUNCTIONS OF THE MATURE 50S SUBUNIT (BY
CC SIMILARITY).
CC -!- SIMILARITY: BELONGS TO THE L24P FAMILY OF RIBOSOMAL PROTEINS.
CC -----

RL SUBMITTED (OCT-1994) TO EMBL/GENBANK/DBJ DATA BANKS.
CC -!- FUNCTION: ITS PHYSIOLOGICAL SUBSTRATE SEEMS TO BE THE SMALL HEAT
CC SHOCK PROTEIN (HSP27/HSP25). IN VITRO CAN PHOSPHORYLATES GLYCOGEN
CC SYNTHASE AT SER-7 AND TYROSINE HYDROXYLASE (ON SER-19 AND SER-40).
CC THIS KINASE PHOSPHORYLATES SER IN THE PEPTIDE SEQUENCE, HYD-X-R-
CC X(2)-S, WHERE HYD IS A LARGE HYDROPHOBIC RESIDUE (BY SIMILARITY).
CC -!- ENZYME REGULATION: SEEMS TO BE ACTIVATED BY TWO DISTINCT PATHWAYS:
CC THE FIRST INVOLVES THE STIMULATION OF P42/P44 MAPK BY GROWTH
CC FACTORS, THE SECOND, TRIGGERED BY STRESS AND HEAT SHOCK, DEPENDS
CC ON THE ACTIVATION OF MPK2 AND UPSTREAM MAPKK/MAPKKK.
CC -!- PTM: PHOSPHORYLATED AND ACTIVATED BY MAP KINASE.
CC -!- SIMILARITY: WITH THE CONSERVED CATALYTIC DOMAINS OF SER/THR-
CC PROTEIN KINASES.

Statistics: Mean 16.972; Variance 49.980; scale 0.340

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT and immune disorders
PS Claim 1; Page 10-12; 15pp; Japanese.
CC The present sequence represents human semaphorin (translated from the
CC Japanese specification as semaforin) Semaphorin has nerve extension
CC inhibiting activity. The semaphorin gene is useful for the diagnosis,
CC treatment and researches on nervous diseases and immune diseases.

PT Nucleic acid molecule encoding CD100 antigen - which stimulates
PT leukocyte response, e.g. B cell aggregation, differentiation,
PT survival and T cell proliferation
PS Example 8; Page 86-89; 135pp; English.
CC Mouse CD100 antigen (W17657) is a novel leukocyte semaphorin-like
CC protein that stimulates a leukocyte response, including B cell
CC aggregation, B cell differentiation, B cell survival and/or T cell
CC proliferation. Its amino acid sequence was deduced from a cDNA
CC clone (T60666) isolated from murine T cells. Human CD100 antigen
CC (W17657) has also been identified. CD100 polypeptides and fusion
CC proteins, nucleic acids, and host cells expressing CD100 can be
CC utilised in diagnostic and therapeutic methods involving modulation
CC of B and T cell responses, neuron axonal growth and immune cell-
CC nerve cell interaction.

PT New isolated human genes and the secreted polypeptide(s) they encode
PT - useful for diagnosis and treatment of e.g. cancers, neurological
PT disorders, immune diseases, inflammation or blood disorders
PS Claim 1; Page 595; 721pp; English.
CC This sequence represents a secreted human protein encoded by the nucleic
CC acid molecule designated Gene 89 from the human cDNA clone HNEBI60
CC (deposited as clone ATCC 97901 and ATCC 209047).
CC The gene can be used to generate fusion proteins by linking to the gene
CC to a human immunoglobulin Fc portion (e.g. V59502) for increasing the
CC stability of the fused protein as compared to the human protein only.
CC The invention relates to 186 novel genes and their fragments (nucleic
CC acid sequences: V59511-V59812; amino acid sequences W74731-W75026) which
CC are useful for preventing, treating or ameliorating medical conditions
CC e.g. by protein or gene therapy. Also, pathological conditions can be
CC diagnosed by determining the amount of the new polypeptides in a sample

CC or by determining the presence of mutations in the new polynucleotides.
CC Specific uses are described for each of the 186 polynucleotides, based on
CC which tissues they are most highly expressed in (see V59511 for described
CC uses).

 PT Semaphorin Z and the gene encoding it - also inhibitors of its
 PT action which can be used as promoters of central nerve regeneration
 PS Claim 3; Page 66-71; 106pp; Japanese.
 CC This sequence represents the rat semaphorin Z. This protein sequence, and
 CC the human semaphorin Z protein (see W19857) can be used for screening
 CC possible candidates for activity as semaphorin Z inhibitors. Proteins
 CC containing all or part of the semaphorin Z sequence are useful as central
 CC nerve extension inhibitors. Semaphorin Z inhibitors identified by
 CC screening can be used as promoters of central nerve regeneration.

 PT Nucleotide and protein sequences for human and rat nestin -
 PT distinguishes neural multipotential stem cells and brain tumour
 PT cells from more differentiated cell types; for use in the
 PT diagnosis of brain tumours
 PS Claim 5; Column 47-56; 45pp; English.
 CC This sequence is the human nestin protein encoded by Q70448.
 CC Nestin protein expression distinguishes neural multipotential stem
 CC cells and brain tumour cells from the more differentiated neural
 CC cell types (eg., neuronal, glial and muscle cells of the adult brain).
 CC The nestin protein can be used in diagnosing tumours of the brain,
 CC such as medulloblastomas, glioblastomas and oligodendroglioma.

PT Diagnosis of pre-disposition to brain tumours - using DNA
PT encoding nestin which distinguishes neural multi-potential stem
PT cells from neuronal, glial and muscle cells
PS Claim 3: Fig 2: 63pp; English.
CC The human nestin gene was isolated using low stringency DNA
CC hybridisation of a human genomic phage lambda library with a rat
CC nestin probe. The amino acid sequence of the nestin gene was
CC deduced from the nucleotide sequence. The human nestin amino acid
CC sequence shows 75% similarity with the rat nestin sequence. There
CC is more than 60% identity between the two sequences. Antibodies to
CC nestin protein can be used in vivo diagnosis of brain tumours.
CC See also Q28398 for the rat nestin gene.

PT New isolated Salmonella secreted proteins and related genes - used
PT to develop products for the detection, treatment or prevention of
PT Salmonella infections
PS Claim 3: Fig 22: 95pp; English.
CC Salmonella typhimurium secreted proteins SspB, SspC, SspD and SspA
CC (W15268-71) are virulence factors involved (except SspA) in
CC bacterial mediated endocytosis, and are able to translocate into
CC human epithelial cells. Ssp secretion is dependent on expression
CC of PrgH (see also T67036). Ssp genes (T67028-31) were isolated
CC by examining S. typhimurium mutants in invasion assays on HEp-2
CC epithelial cells. Ssp polypeptides can be used in methods for the
CC detection, treatment or prevention of Salmonella infection.
CC Chimeric proteins incorporating Ssp can be used to target an
CC antigen to epithelial cells or to induce a cytotoxic T cell
CC response in a mammal. Decreased secretion of Ssp provides
CC attenuated bacterial cells suitable as live vaccines.

MPSrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Thu Jul 8 18:37:44 1999; MasPar time 4.98 Seconds
Tabular output not generated. 618.816 Million cell updates/sec

Title: >US-09-041-236-2
Description: (230-338) from US09041236.pap (16 of 45)
Perfect Score: 811
Sequence: 1 VAQLCRGQGGESSLSVSKW.....LKGYHSSLPNRPKGKCLPDQ 109

Scoring table: PAM 150
Gap 11

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0%
Listing first 45 summaries

Database: swiss-prot37
1:swissprot

Statistics: Mean 40.747; Variance 63.822; scale 0.638

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT Transgenic potato plants with improved cold storage characteristics
PT - are modified plants with reduced alpha glucan L or H type
PT phosphorylase activity, and have reduced cold sweetening
PS Disclosure; Page 50-53; 9ipp; English.
CC The sequence is that of alpha-glucan L-type tuber phosphorylase
CC which can be used in the production of a potato plant with
CC improved tuber cold-storage characteristics. Such plants can be
CC used in agricultural potato production. The potatoes are especially
CC useful in the manufacture of potato chips. The method reduces
CC cold-sweetening (conversion of starches to sugars), resulting
CC in the ability to store potatoes cooler temperatures. This
CC produces prolonged dormancy, reduced incidence of disease and
CC increased storage life. The potatoes also have improved specific
CC gravity and improved chip score.

PT Non-A, non-B, non-C, non-D, non-E Hepatitis virus reagents - useful
PT for diagnosis and therapy of hepatitis GB virus
PS Example 5; Pages 199-200; 661pp; English.
CC Double stranded hepatitis GB virus (HGBV) DNA obtd. from HGBV
CC infected tamarin plasma, using standard procedures, was used to
CC prepare a lambda phage HGBV cDNA library. The cDNA clone T00042,
CC which encodes the proteins R81411-16 (the 6 possible reading a
CC frames), was rescued from the lambda phage, searched against a
CC sequence database and found to be an unique HGBV sequence.
CC Reagents which comprise the HGBV DNA, or its protein prods. can
CC be used for the diagnosis, therapy or in a vaccine to prevent
CC HGBV infection.

PT Identifying polypeptide(s) having specific functional domain (esp.
SH3 domain) - comprises detecting selective binding to recognition
unit, regardless of sequence homology
PS Claim 54; Fig 57; 174pp; English.
CC W0386-W03403 represent novel human and mouse Src-homology region 3 (SH3)
domain containing proteins that can be used in the method of the
invention. SH3 domain containing proteins play a role in signalling and
structural elements of cells. The method of the invention is for
identifying polypeptides containing functional domains of interest
(especially SH3 domains). The method comprises contacting a multivalent
recognition unit (RU) complex with a number of peptides and identifying
polypeptides having a selective binding affinity for the RU complex. The
method is based on functional similarities and does not rely on sequence
similarities. Prior methods only gave limited success for identifying
proteins which contain an SH3 domain due to the minimal sequence homology
among known SH3 proteins. It has been found that small peptide RUS in
multivalent form have reduced specificity for a given functional domain
compared to monomer RUS. Multivalent RU complexes are particularly suited
to screening for polypeptides containing functional domains that are
similar to, but not identical in sequence to, the original target
functional domain. The new method enables proteins having a common
function to be identified. Identification of novel SH3 proteins will be
useful for a better understanding of cell growth, malignancy, signal
transduction processes, etc. New candidate drugs can be identified, and
their specificities (e.g. pharmacological activities) can be assessed
using the method of the invention.

PT Enhancing long-term memory in subjects whose cAMP-responsive gene is
PT repressed - used to treat long-term memory defects, e.g. age-related
PT memory loss, Alzheimer's disease
PS Example 2; Page 73-74; 100pp; English.
CC This protein comprises the cAMP-response element binding protein-2,
CC i.e. ApCREB-2, of the marine snail *Aplysia*. ApCREB-2 is a
CC transcription factor and repressor of long-term facilitation in
CC *Aplysia* neurons. It is constitutively expressed in sensory
CC neurons. ApCREB-2 is a homologue of human CREB-2 and mouse ATF-4.
CC The amino acid sequence of ApCREB-2 was deduced from a polynucleotide
CC sequence (see V04079) obtained from 2 clones isolated from an *Aplysia*
CC central nervous system cDNA library. The invention provides a method
CC of enhancing long-term memory in a subject whose cAMP-responsive gene
CC expression is repressed due to binding of a CREB-2 to a protein or
CC DNA associated with cAMP-responsive gene expression, or both. The
CC method involves administering to the subject a compound capable of
CC interfering with such binding so as to derepress cAMP-responsive gene
CC expression and thereby enhance long-term memory. Such compounds
CC include anti-CREB-2 antibodies or a compound capable of altering
CC phosphorylation of CREB-2. The method is used to treat e.g.
CC age-related memory loss, Alzheimer's disease, amnesia, ischaemia,
CC shock, head trauma, neuronal injury, toxicity or degradation,
CC Parkinson's disease or senility (claimed).

PT Production of highly pure ubiquinone-10 - by recombinant
PT microorganism comprising gene encoding decaprenyl di-phosphate
PT synthase
PS Claim 5; Page 10-11; 14pp; Japanese.
CC The present sequence represents decaprenyl diphosphate synthase (DBS)
CC from *Gluconobacter suboxydans*. The protein is shown to continue after
CC the first stop codon but the claimed sequence having 315 amino acids
CC does not. Extended protein is shown in W53920 and W53921, while the
CC 315 amino acid sequence as shown in figure 1 of the specification is
CC shown in W53922. The present invention describes a transgenic microbial
CC organism comprising a gene encoding DBS. The transgenic microbial host
CC may be used to produce ubiquinone-10. The ubiquinone-10 produced by the
CC host is highly pure.

PT S-adenosyl-L-homocysteine hydrolase promoter - used for driving
PT expression of effector genes, such as pathogen resistance genes, in
PT transgenic plants
PS Example 1; Fig 1; 57pp; English.
CC Asparagus S-adenosyl-L-homocysteine hydrolase (SHH) (W01458)

CC catalyses the reversible hydrolysis of S-adenosyl-L-homocysteine
CC to adenosine and homocysteine. It contains an extra stretch of
CC amino acid residues (positions 150-190) previously found in other
CC photosynthetic species, parsley and Rhodospirillum rubrum, but not
CC in SHHs from non-photosynthetic species. A cDNA sequence (T44513)
CC coding for the asparagus was used to identify the Arabidopsis
CC thaliana SHH gene (T44515) and promoter (T44514), useful for
CC expression of effector genes in transgenic plants.
